Did you know that the damage caused to a hotel's reputation by being listed on Trip Advisor or The Bed Bug Registry can have a tremendous effect on your bottom line? Check to see if you are listed online already!

Allergy Technologies' FAQ:
Are Bed Bugs for Real?

Yes, there really are things called bed bugs or, scientifically called Cimex lectularius (Cimicidae). Adult bed bugs are about the size of an apple seed, with their earliest juvenile form approaching the size of a poppy seed. Bed bugs feed on the blood of warm blooded animals and have become a significant problem in the U.S. and around the world. Bed bugs tend to feed at night (nocturnal) when you are sleeping and then return to a safe and undisturbed harborage site, which are usually near the bed. Mattresses and box springs are notoriously favorite places where bed bugs will populate and lay eggs; therefore, protecting the bedding area (both the mattress and box spring) should be a prime focus.

Bed Bug Myths - Series 1

Bed bugs are one of those elusive, mysterious pests that people don't quite understand. This commonly encountered pest can easily be brought into a home or business regardless of a person or business' best efforts. And, while the Internet is full of advice on how to avoid them, some of this advice is simply incorrect while other theories are really half-truths, false beliefs or remnants of 'old wives' tales' that won't effectively prevent a bed bug infestation from occurring.

In order to clear up some misconceptions about bed bugs we compiled the following list of bed bug myths. A thorough understanding of bed bugs and keen awareness of what to watch out for is necessary to keep your home or business safe from a bed bug infestation:

Myth: Bed bugs only occur in dirty, low-income housing scenarios and cheap roadside motels. My home is safe from bed bugs.

Read the full article here...

(EDITORS NOTE: When seeking out information about bed bugs ensure that you are relying on a legitimate site such as a pest control company, state university or national association like the National Pest Management Association. We will continue to debunk bed bug myths and encourage you to send in questions about bed bugs to: info@allergytechnologies.com.)

The difficulty in treatment of bed bug infestations is that they also can hide behind head boards, in walls, behind pictures and even in computers and clock radios. That is why it is important to work with a Pest Management Professional specializing in bed bug remediation when confronted with this problem. Protecting the mattress and box spring is just one step in creating a successful comprehensive strategy for eliminating bed bugs. ActiveGuard® kills bed bugs in mattresses and box springs continuously for up to two years after installation, far exceeding the life span of this pest.

8 Powerful Modifications to Make Your Hotel More Bed Bug Resistant

Whether making tweaks to current hotel room configurations or considering changes for future design plans, forethought and implementation of preventive bed bug measures can certainly assist in lowering the incidence of bed bug infestations in hotel rooms.

Disturbed!

Compared to other problematic room issues such as signs of smoking or lack of cleanliness, evidence of bed bugs is more likely to cause guests to switch hotels and seek compensation.

Click on the links above to visit our social media sites and learn more about ActiveGuard®.

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. ActiveGuard®'s formulation represents a unique and proprietary delivery system that offers sustained bioavailability of permethrin for two years. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard® proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

ActiveGuard® Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! Newest research supports that after short exposure to ActiveGuard® of only 10 min, bed bugs regardless of their level of resistance, begin to show significant reductions in feeding (biting) and a dramatic inability to lay eggs. Real world consequences of this data include discontinuation of population growth thereby halting progression of an incident to an infestation. If you are seeking a pro-active preventative approach, ActiveGuard® should be considered as the centerpiece of your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard® is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners' two-year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

This presentation discusses the challenges bed bugs present and your important role in protecting students and staff. Successful bed bug management requires a proactive strategy and begins by engaging and educating the entire school community on how to recognize and stop them.

Allergy Technologies' FAQ:

My Pest Management Professional wants me to throw out my mattress and box spring because of bed bugs. Can I use ActiveGuard® instead?

Bedding is hard to treat and some Pest Management Professionals will suggest that infested bedding be thrown away. This is because mattresses and box springs are sites where bed bugs and their eggs are hard to access and kill; many of these may be left alive even after a thorough treatment by a Pest Management Professional.

ActiveGuard® may be used to salvage infested bedding as part of a treatment program or to protect bedding from future infestation because its unique structure will

Holiday Bed Bug Prevention

Bed bugs are in the news daily. Dorm rooms, city halls, libraries, hospitals, hotels and apartment complexes have all been in the news this past month alone for bed bug infestations. With the holiday travel season fast approaching how do you prevent bed bugs from infiltrating beds in your home, client accounts, hotel or inn?

These skilled hitchhikers can easily crawl onto personal belongings and make their way into a bedroom near you. Having a keen understanding of the signs of bed bugs and being vigilant about inspecting regularly for bed bugs will help to keep your bed and your client’s bed bug free. Remember the following steps this holiday season and you too can prevent an infestation or at least uncover one early on:

G o Prepared. When traveling, be sure to pack a flashlight and follow these steps to inspect any bed you sleep in for bed bugs.

U ncover your mattress and box spring each week to inspect for bed bugs.

A wareness of the signs of bed bugs is key to prevention and early detection.

R ashes or bites on you or anyone in your home should be investigated to rule out the possibility of bed bugs.

D efend your beds at home with an ActiveGuard® Mattress Liner. The first mattress liner to actually kill bed bugs; typically within 72 hours of contact. Stop the Bites...Prevent the Infestation!

If your school has bed bugs, should it close?

Got bed bugs? Deptford High School does, and it won't shut down.

"Finding a bed bug does not mean that our school building is infested," reads a note from the school's principal. "Bed bugs are often unknowingly brought into the school by building occupants and as a result we may have future sightings." The source of bed bugs, however, has yet to be determined.

Call me crazy, but I think one bed bug is one too many to keep a school open. Close it for a day and fumigate- what's so bad about that? I'm curious about who pushed for the school to be open.

Many callers shared their experience with bed bugs (October 26th), and expressed concern that the school would still want kids to come in.

October 2015

When Bed Bugs Strike Public Spaces

Bed bugs have been all over the news these last two months. But, unlike their name suggests, they are not just being found in beds. In the last month alone bed bugs sent City Hall workers home in Philadelphia, closed an elementary school and caused the relocation of a movie premiere in New York City. They've infiltrated numerous libraries and caused quite a stir on Philadelphia's SEPTA buses.

It's not surprising that after the busy summer travel season a slew of reports of bed bug activity have hit the news. These skilled hitchhikers will catch a ride on a person or their belongings and drop off again at their home, office or somewhere along the way. They can go for almost a year without a blood meal, hiding in cracks and crevices by day and seeking out their next blood meal by night.

If bed bugs are being reported in a city near you, don't panic. Be cautious where you place your belongings when you are out or about. Choose hard surfaces to lay your bags on rather than fabrics, as soft coverings offer more opportunities for hiding spots. Take care not to return your bags or other personal belongings to the sleeping area of your home when you return and wash and dry your clothing on the hottest setting possible for thirty minutes. Be vigilant and check for bed bugs in and around your mattress and box spring when you change your sheets (preferably every week). Remember, early detection makes control of the infestation much quicker, less expensive and certainly less psychologically distressing!

Did you know that the damage caused to a hotel's reputation by being listed on Trip Advisor or The Bed Bug Registry can have a tremendous effect on your bottom line? Check to see if you are listed online already!

Allergy Technologies' FAQ:
Who should use ActiveGuard® Mattress Liners

Anyone who has a known bed bug infestation or is concerned about preventing a bed bug infestation should consider using ActiveGuard®. Bed bug bites are painful, itchy, and can even cause allergic reactions. Bed bugs are becoming increasingly prevalent, and can easily spread between homes, apartments, college dormitories and hotel rooms. Bed bugs feed on blood and, most commonly, bite people in their beds while they are sleeping. ActiveGuard® Mattress Liners offer protection because they kill bed bugs in mattresses and box springs. ActiveGuard® helps in preventing bedbugs from creating a home in your bedding and may help save costly mattress replacement if you should suffer a bedbug infestation.
ActiveGuard® should be used as part of every comprehensive bed bug management strategy. If you have an existing bed bug infestation, you should immediately contact a licensed Pest Management Professional.

Anyone who suffers from respiratory allergies, asthma, or skin allergies such as eczema or atopic dermatitis may also benefit from the use of ActiveGuard® Mattress Liners. Dust mite allergens are a leading symptom trigger for these conditions. ActiveGuard® kills dust mites and prevents them from returning for up to 2 years.

Horrifying study shows how far bed bugs can spread in Apartment buildings

If bed bugs are living in your home, they are probably hiding out and waiting to sense the carbon dioxide from your breath to hone in on their next blood meal. But how did they get there in the first place? If you haven't recently picked up a mattress off the street (always a good plan), it's often assumed that they could have migrated from your neighbor's place. But how frequent these wanderings are, or if they actually happen, hasn't been demonstrated... until now! Here, scientists captured bed bugs from infested apartments in New Jersey, painted their backs, released them, and then watched over the next several months to see where the little monsters ended up. It turns out that, yes, bed bugs make the rounds of neighboring apartments, and they can live inside empty apartments for months without a blood meal. And perhaps the worst part? "The estimated number of bed bugs per apartment in the six apartments was 2,433-14,291." Sleep tight!

Does Bed Bug Prevention Make Sense?

The old adage "...an ounce of prevention is worth a pound of cure..." could not be more poignant than when applied to bed bug prevention. Pest management professionals (PMPs) now have in their arsenal a myriad of actives (e.g., bi-functional, halogenated pyrroles, neonicotinoids, and silica-based dusts) and devices for active bed bug remediation (chemical/thermal/physical) however, very few are actually labeled for long-term prevention and control.

As seen in the October 2015 Connectivity Newsletter pg. 10

September 2015

Back to School and Bed Bugs? (Proactive Prevention)

The busy summer travel season is now behind us and the kids have gone from camp back to school. Whether you traveled personally or hosted summer travelers in your home, hotel or campus, you may be wondering if bed bugs could be a lingering side effect of summer travel.

Whether or not you are taking steps to prevent bed bugs in your home or business, regular inspections are critical to early detection. Dispelling myth, bed bugs are visible to the naked eye and beds and bedding should be carefully inspected each time the sheets are changed (ideally on a weekly basis). Adult bed bug adults are small, oval-shaped insects with 6 legs, one pair of antenna, and no wings. Younger juvenile forms are smaller and can be a bit more difficult for the untrained eye to see. Bed bugs are red to brown in color and very flat, unless they recently fed which will make them look rounded. These nocturnal blood-suckers typically hide during daylight hours and come out at night to feed off of their sleeping hosts.

If you do detect bed bugs, it is highly recommend that you work closely with a pest professional. Bed bugs can be extremely difficult to control solely with do-it-yourself measures.

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. ActiveGuard®'s formulation represents a unique and proprietary delivery system that offers sustained bioavailability of permethrin for two years. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard® proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

ActiveGuard® Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! Newest research supports that after short exposure to ActiveGuard® of only 10 min, bed bugs regardless of their level of resistance, begin to show significant reductions in feeding (biting) and a dramatic inability to lay eggs. Real world consequences of this data include discontinuation of population growth thereby halting progression of an incident to an infestation. If you are seeking a pro-active preventative approach, ActiveGuard® should be considered as the centerpiece of your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard® is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners' two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

August 2015  
Time for Proactive Bed Bug Prevention

August is here and for a large portion of the country it means Back-To-School time. Students and parents are preparing for yet another school year to begin by stocking up on supplies. If a boarding school, college or university is in your family's plans or under your area of responsibility, then this is a MUST read!

Dormitories and apartment buildings in college and university towns are often high traffic areas. Students come and students go, and not only during the school year.

Summer months may actually see a weekly turnaround in tenants. High turnover in rooms put them at high risk for the introduction of bed bugs. Students can and should be protected from these blood-sucking critters. While not known to carry disease at this time, they do pose a significant distraction, inconvenience, expense and psychological struggle for their victims.

Choosing proactive protection like an active mattress liner for dorm rooms and other student housing environments is a wise and cost-effective choice to stop an infestation ‘dead in its tracks’

Sleep Tight and ,Well, You Know the Rest: Travel Tips to Keep the Bed Bugs From Biting

Bed bugs are an ongoing and enormous problem for the travel industry -- from airlines and cruise ships to hotels, motels, and every place in between.
bedbug infestation. ActiveGuard® should be used as part of a comprehensive bed bug management strategy. If you have an existing bed bug infestation, you should immediately contact a licensed Pest Management Professional.

Furthermore, anyone who suffers from respiratory allergies, asthma, or skin allergies such as eczema or a topic dermatitis may benefit from the use of ActiveGuard® Mattress Liners. Dust mite allergens are a leading symptom trigger for these conditions. ActiveGuard® kills dust mites and prevents them from returning for up to 2 years.

Don't Miss Your Chance: PMPs Put ActiveGuard® Mattress Liners to the Test in Free Liner Trial Program Which Ends This Month

As the saying goes all good things must come to an end. And soon, so will Allergy Technologies ‘Free Liner Trial Program’. The program has been a huge success with hundreds of pest professionals trialing the product. August 2015 will be the final month to put the product to the test in your own Free Liner Trial.

The Free Liner Trial Program was specifically designed for Pest Management Professionals to conduct a field demonstration to confirm the benefits of using ActiveGuard® in their bed bug treatment program. Making a decision to revise your bed bug remediation strategy is complicated. Your clients depend upon you to provide the most effective program possible! PMPs strive to ensure customer confidence, business growth and income (both earned and retained).

Allergy Technologies is confident that ActiveGuard® will perfect any program, both in active remediation and as the centerpiece in a pro-active preventative strategy. For your final chance to register for the program, click here.

Could I have bed bugs?

This article is humorous take on the ‘7 Exhausting Stages of Thinking You Have Bed Bugs’

Read More...

Can You Really Prevent Getting Bed Bugs?

Each year bed bugs affect millions of people in the United States alone. And these critters do not discriminate. They can be found in luxury homes, low-income apartments, hotels, movie theatres, schools, shelters, department stores and nearly anywhere people frequent. How do you determine if you are at high risk for a bed bug infestation?

Find out here...

On The Road with Allergy Technologies in August

Allergy Technologies will be "On the Road" at:

- August 5, 2015 - Bed Bug Seminar, No Bugs, Philadelphia, PA
- August 13, 2015 - Residex Golf CAD, Essex, MD
- August 18, 2015 - GPCA Charity Golf Tournament, Conyers, GA
- August 18, 2015 - Residex Customer Appreciation Barbecue, Hicksville, NY
- August 20, 2015 - NJPMA Clinic, Tradeshow & Clambake, Rutgers College, NJ
- August 26, 2015 - Mississippi PCA Summer Workshop, Raymond, MS
- August 27, 2015 - Western Pennsylvania Pest Management Association, Mars, PA

In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard® will create and secure more revenue for each and every bed bug job performed. July 2015

Proactive Prevention

Summer travel season is upon us. According to the AAA ('triple A'), 41.9 million Americans celebrated Independence Day with a holiday getaway this year.

With hotels, motels and university dorms filled to capacity for the summer it provides bed bugs a golden opportunity to make their way across the country. Bed bugs do not discriminate. They will infest any room from a roadside motel to a five star resort. They can be left behind by a camper in a campus dorm room and survive without a blood meal until the start of school in September, causing a major outbreak.

While there is simply no way you can prevent bed bugs from being introduced into an area, you can take proactive steps to stop an infestation before it establishes. Proactive prevention is our topic of discussion this month as we find ourselves in the midst of one of the busiest travel seasons to date. Read on to learn more about how you can protect your hotel, motel, campus dorm rooms, vacation home and even yourself personally from bed bugs.

8 Powerful Modifications to Make Your Hotel More

ActiveGuard® Mattress Liners offer protection because they kill bed bugs in mattresses and box springs. ActiveGuard® helps in preventing bedbugs
from creating a home in your bedding and may help save costly mattress replacement if you should suffer a bedbug infestation. ActiveGuard® should be used as part of every comprehensive bed bug management strategy. If you have an existing bed bug infestation, you should immediately contact a licensed Pest Management Professional.

Anyone who suffers from respiratory allergies, asthma, or skin allergies such as eczema or atopic dermatitis may benefit from the use of ActiveGuard® Mattress Liners. Dust mite allergens are a leading symptom trigger for these conditions. ActiveGuard® kills dust mites and prevents them from returning for up to 2 years.

Free Liner Trial Program Gives PMPs & Hotels Instant Access to ActiveGuard® Mattress Liners

For a limited time, Allergy Technologies has implemented a ‘Free Liner Trial Program’, one specifically designed for Pest Management Professionals and one for hotels.

Each were created to conduct a field demonstration to confirm the benefits of using ActiveGuard® in their bed bug treatment program. Making a decision to revise your bed bug remediation strategy is complicated. Your clients and guests depend upon you to provide the most effective program possible! PMPs and hotels alike strive to ensure customer confidence, business growth and income (both earned and retained). Allergy Technologies is confident that ActiveGuard® will perfect any program, both in active remediation and as the centerpiece in a pro-active preventative strategy.

Bed Bug Resistant

The design choices that hotels make may be creating a welcoming environment for bed bugs. Bed bugs are elusive pests and an intrusive guest that no hotel wants. Making tweaks to current hotel room configurations, considering these changes in future design plans or implementing a preventive bed bug measure can certainly assist in lowering the incidence of bed bug infestations in hotel rooms.

Active MultiMedia

I am traveling this summer. What precautions can I take to protect myself against bed bugs?

Before you move in, always inspect your hotel room for bed bugs. Learn how here

Preventive bed bug treatments are on the rise but do your homework when choosing the right product for the job

Bed bugs don't have to be a pest that you only react to. The latest survey from the National Pest Management Association (NPMA) and the University of Kentucky polled a nationwide sample of pest management professionals and found that 77% offer a preventive bed bug treatment.

But choosing the right product can make all of the difference, particularly when it comes to bedding covers. Encasements protect the bed while active bedding liners protect those sleeping in the bed and work to prevent an infestation. Active liners work by killing bed bugs that come into contact with the liner, most generally within 72 hours. However, a study on ActiveGuard® Mattress Liners recently demonstrated that after ONLY ten minutes of contact with the liner bed bugs stop their ability to drop their eggs and even feed. Bed bug prevention is particularly important to those high-risk accounts such as hotels, motels, campus dorms, housing authorities and more.

Remember. Stop the Bites. Prevent the Infestation!

Allergy Technologies Announces National Sales Promotion for Pest Professionals

Bed bug infestations are on the rise and the summer travel season brings many opportunities for bed bugs to spread. Allergy Technologies is pleased to announce a Summer Savings Spectacular, a savings program for pest management professionals. Beginning July 1st pest professionals can receive 1 free case of ActiveGuard® for every 3 cases they purchase. The 3 cases must be purchased between the program period of July 1 through August 31, 2015. Cumulative purchases will qualify. To receive free product, proof of purchase must be sent to the company not later

**THE HIT LIST:**

Is Your Hotel rated on the Web as "Bed Bug Infested?"

![Bed Bug Image]

Did you know that the damage caused to a hotel’s reputation by being listed on Trip Advisor or The Bed Bug Registry can have a tremendous effect on your bottom line? Check to see if you are listed online already!

---

**Allergy Technologies’ FAQ:**

My Pest Management Professional suggested I use an encasement instead of ActiveGuard®.

Do encasements kill bed bugs?

![ActiveGuard Image]

Encasements are a passive device originally developed to maintain the sanitary condition of mattresses and box springs. Closure improvements by some manufacturers provide that upon proper installation of their encasements, bed bugs may be sealed inside preventing them from escaping and feeding. Similarly, bed bugs should be prevented from entering a mattress or box spring once encased. Unfortunately, even the best encasements will rip or tear when being installed if they are ill-fitting or snag on a sharp surface. In addition, encasements can wear holes after they are installed through constant rubbing on rough surfaces.

---

**June 2015**

**Bed Bug Awareness Week**

Next week (June 7th - 14th) the National Pest Management Association spearheads the observation of 'Bed Bug Awareness Week'. The timing couldn’t be more perfect to educate and raise awareness to home and business owners about bed bugs, just as college students are returning from school and everyone is gearing up for the busy summer travel season.

Bed bugs do not discriminate!!!

According to a recent survey, nearly two out of three pest management professionals report that bed bug infestations continue to be on the rise. Bed bugs can affect anyone from homeowner to business owner. We urge you to consider a proactive, preventive plan to protect yourself from the anxiety and ramifications of an infestation in your home or business. Ask your pest professional how you can protect yourself, your family and your business from bed bugs.

**Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country**

- **Business Wire:** “The National Pest Management Association and the University of Kentucky find nearly all U.S. pest professionals have treated bed bugs in the past year.”
  
  Read the full story here.

- **NYPPost.com:** “Bed Bugs Take Over Famous Synagogue Causing Shut Down”... More.

- **The Columbia County News-Times:** "Bed Bug Sightings on the Rise in the U.S.... More.

- **Fox 26 KNPN:** "Remember to check for bed bugs this travel season.... More.

- **LAWeekly.com:** “This Means War: Bed bugs are infesting California.... More.

**Bed Bugs and Summer Travel How to Protect Yourself**
Any hole in an encasement will allow a bed bug to escape and seek a blood meal by biting a host. There is no field evidence that taping or repairing a ripped or torn encasement will provide any lasting relief and a damaged encasement should be replaced immediately.

In contrast, ActiveGuard® doesn’t cover bed bugs, it kills them! ActiveGuard® is not dependent on zippers or the integrity of the encasement material. Puncture holes in the ActiveGuard® liner will not affect the effectiveness of the liner, which is designed to kill bed bugs in mattresses and box springs on the basis of contact.

Free Liner Trial Program Gives PMPs & Hotels Instant Access to ActiveGuard Mattress Liners

For a limited time, Allergy Technologies has implemented a ‘Free Liner Trial Program’, one specifically designed for Pest Management Professionals and one for hotels.

Each were created to conduct a field demonstration to confirm the benefits of using ActiveGuard® in their bed bug treatment program. Making a decision to revise your bed bug remediation strategy is complicated. Your clients and guests depend upon you to provide the most effective program possible! PMPs and hotels alike strive to ensure customer confidence, business growth and income (both earned and retained). May 2015  Bed Bugs and Summer Break

College students from across the country are counting down the days until summer break while parents back home are anxiously awaiting their return. But stop right there! Before you welcome your college student back into your home along with all of their belongings, you will want to take a few precautions to ensure that they have come home alone. We're not talking about their new roommate hiding inside of their luggage but rather bringing home a very undesirable houseguest: the dreaded bed bug!

Bed bugs are a major problem assaulting college dorms and apartments. Any multi-unit housing environment with transient tenants like college students are at a heightened risk for bed bug infestations. Bed bugs are excellent hitchhikers and just as they hitchhiked their way into student housing, they can take an uninvited ride on your student's belongings and end up in your home. But fear not, we have you covered with tips from a mom who's been there, done that with three kids of her own.

Read on to meet Mom Patty and learn how she successfully prevents bed bugs from coming home with her three college-aged sons.

Allergy Technologies’ FAQ: Who Should Use ActiveGuard Mattress Liners?

Anyone who has a known bed bug infestation or is concerned about preventing a bed bug infestation should consider using ActiveGuard®. Bed bug bites are painful, itchy, and can even cause allergic reactions. Bed bugs are becoming increasingly prevalent, and can easily spread between homes, apartments, college dormitories and hotel rooms. Bed bugs feed on blood and, most commonly, bite people in their beds while they are sleeping. ActiveGuard® Mattress Liners offer protection because they kill bed bugs in mattresses and box springs. ActiveGuard® helps in preventing bedbugs from creating a home in your bedding and may help save costly mattress replacement if you should suffer a bedbug infestation. ActiveGuard® should be used as part of every comprehensive bed bug management and preventive

Student's Ultimate Cheat Sheet to Avoid Bed Bugs at College

As bed bugs have reached epidemic proportions, more and more college campuses are gearing up to battle this bloodthirsty pest. Students need to equip themselves with facts and information about bed bugs so they can identify an infestation early on, take action if they notice bed bug activity in their room, but, most importantly, take steps to prevent them entirely.

For a complete set of tips click here.

On The Road with Allergy Technologies in April

Allergy Technologies will be "On the Road" at:

- May 2, 2015 - Pee Dee PCA - Clay Shoot, Kingstree, SC
- May 3-6, 2015 Southeast Pest Management Conference, Gainesville, FL
- May 13, 2015 - Univar 14th Annual Invitational Golf Tourney, Suwanee, GA
- May 19, 2015 - Residex Training Seminar, Silver Springs, MD
- May 29, 2015 - MD PCA Last Chance Recertification and Exhibitor Meeting, Linthicum, MD

In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard® will create and secure more revenue for each and every bed bug job performed. Further, hear about some tips and guides on establishing pro-active bed bug preventative programs, a new source of renewable income! If you are interested in learning more, please contact us at info@allergytechnologies.com to arrange a time to schedule a personalized presentation about ActiveGuard® Mattress Liners and YOU!

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. ActiveGuard®'s formulation represents a unique and proprietary delivery system that offers sustained bioavailability of permethrin for two years. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard® proceeds go to help fund inner-city
homeless and women's shelters and asthma clinics.

ActiveGuard® Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard® should be considered as the centerpiece of your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard® is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

April 2015 Preventing Bed Bugs in Hotels

It's Spring Break 2015 and a new kind of travel warning is hitting the news: Beware of Bed Bugs! From the Travel Channel to ABC News you can find tips for travelers to avoid bringing home these blood sucking hitchhikers. But can the average person really spot an infested hotel room? Bed bug's nocturnal tendencies and small, thin bodies make them very difficult for even the trained eye to detect. What will this mean for hotels, schools, homeowners and property managers when students and families return from their spring break travels? Answer: a potential onslaught of concerned residents over whether or not they have a bed bug infestation on their hands. Read on for more information about bed bugs on spring break, in hotels, old age homes, residencies and more.

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

ABC15 Phoenix: "A family visiting the Valley from California for Spring Break said they cut their visit short after finding bed bugs at their Phoenix hotel." Read the full story here.

10 On Your Side WavyTV.com: "A senior citizen group home in Hampton is closing, but residents being forced to move can't take their belongings to their new homes..." More.

Seattle My Northwest.com KIRO Radio: "Reports of bed bugs on the rise, but you're not without rights when infestation strikes. Since Seattle is a major port city and hub for travelers, it doesn't help the situation. Neither does the weather. Colder weather extends the life cycle of bed bugs..." More.

brief contact with the fabric, bed bugs lose their inclination and/or ability to feed to completion. Surprisingly, these phenomena, described as ‘sublethal effects’ by Dr. Jones, first begin to develop after only 1 minute of contact.

What does this newly published research mean to a pest professional, “When a bed bug cannot feed the results are less bites; a loss in the ability to mature; and, the inability to reproduce. Consequently, this likely translates to profound long-term effects on the reduction of bed bug populations,” said Joseph Latino, President of Allergy Technologies, home of ActiveGuard® Mattress Liners.

Hotels Handling Bed Bug Complaints

10 Tips for Creating Your Hotel's Bed Bug Complaint Action Plan

Download: NPMA Guidelines - Response to Bed Bugs in Hotels & Lodging

On the Road ... in March

THE HIT LIST:
Is Your Hotel rated on the Web as "Bed Bug Infested?"

Did you know that the damage caused to a hotel's reputation by being listed on Trip Advisor or The Bed Bug Registry can have a tremendous effect on your bottom line? Check to see if you are listed online already!

Allergy Technologies' FAQ:
Will ActiveGuard® Mattress Liners kill bed bugs?

ActiveGuard

Bed bugs can live in a variety of places like bedding, head boards, side tables, radios, pictures and under carpets and in wall voids. ActiveGuard® kills bed bugs in mattresses and box springs, two prime areas where bed bugs like to live. We strongly recommend that, in cases of an active bed bug infestation, you contact a licensed Pest Management Professional who will treat all areas of your room. Quite often, there will be multiple treatments required before total elimination of this pest. For maximum protection, make sure that your infested mattresses and box springs once treated are subsequently covered with ActiveGuard® to kill any

March 2015

Preventing Bed Bugs in Hotels

No hotel is immune to the introduction of bed bugs. In fact, hotels with high occupancy and turnover rates are especially vulnerable to bed bugs since there is statistically a greater chance of guests unknowingly carrying bed bugs into the hotel.

So, if you are a hotel owner, operator, manager or pest professional struggling with bed bug infestations, must you just stand by idly waiting to react to the next outbreak? Are you under the impression that there is little that can be done to 'prevent' a bed bug infestation? While it is true that you cannot stop guests from introducing bed bugs into a hotel, you can take proactive preventive measures to stop bed bugs from spreading and establishing an infestation. This month's Bed Bug Authority focuses on the growing epidemic of bed bug outbreaks in hotels and the proven preventive measures that hoteliers and their pest management companies can take to ward off these infestations early.

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Fox4: "Expert: SWFL bed bug outbreak to get worse before it gets better"Bed bugs are crawling into Southwest Florida in record numbers and a pest control expert predicts the problem will get worse before it gets better. Read the full story here.

**Ten Tips for Creating Your Hotel's Bed Bug Complaint Action Plan**

A negative experience by a guest, like uncovering bed bugs, can quickly go one of two ways: it can be a non-event if handled correctly or it can
The thought of a guest uncovering a bed bug infestation before an employee may keep you awake at night. But preparing your employees to handle such a situation is one of the most important proactive steps you can take. Establish a written action plan so your staff are prepared to handle a bed bug complaint and reduce your chances of it turning into a public relations nightmare. Make certain that once established, this action plan is followed precisely as deviations/omissions can result in significant legal consequences. However, nothing is worse than the absence of a cogent action plan addressing a bed bug issue. The following tips can help you create your own unique bed bug complaint action plan to ensure that the hotelier you are empowering your employees to properly handle the situation when it arises. [Click here to read the full article.]

NPMA Guidelines: Response to Bed Bugs in Hotels & Lodging

(Editor's note: These well-described hotel guidelines were created in 2011. While most of the recommendations contained therein remain valid today, the use of encasements on bedding has not been proven to change the landscape of bed bug incidents nor their transition into established infestations. In fact, the high rate of ripping and perforation of encasements installed on box springs in the hotel industry render their protective ability useless. In contrast, documented evidence has proven that installation of ActiveGuard® Mattress Liners in hotels result in a significant reduction in infestation rates throughout the country.)

February 2015

Bed Bug Prevention and Control

Bed bugs...they are all over the news these days! Orkin just released their Top 50 Bed Bug Cities List for 2014. The news that you may live in, own property in or are planning to visit a city that tops the list of blood-sucking bed bugs is enough to incite fear and paranoia in even the most level headed folks. But fear not. You CAN prevent bed bugs and, in fact, prevention is our biggest story this month. Bed Bug Prevention was a key topic at the National Pest Management Association's (NPMA) Global Bed Bug Summit that took place in Denver, CO last month. If you missed the event you can read the highlights in our recap below. As always, we will take a look at the top bed bug stories from around the country including a look at how Cleveland might take steps to prevent bed bugs as they prepare for the 2016 Republican National Convention. The Convention comes on the heels of dozens of bed bug complaints in Cleveland hotels. As always, we hope you will share 'The Bed Bug Authority' with anyone interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Pest Control Technology: "Chicago Tops Orkin's List of 'Bed Bug Cities' for 2014" - Chicago tops the 2014 Bed Bug Cities list for the third year in a row. The list, released by Orkin, ranks the cities by the number of bed bug treatments Orkin performed from January to December 2014. Read the full story here.

WFTV9 Orlando: "Orlando International Airport Battles Bed Bug Problem in Passenger Waiting Areas" - Channel 9 learned some workers at Orlando International Airport say homeless people sleeping overnight in passenger waiting areas has become a growing problem. While airport authorities won't say homelessness is the cause, a bed bug problem has reportedly developed in areas where transients have been found sleeping…. more.

McAlester News Capital: "Bed Bugs Found at Federally Subsidized Apartments in McAlester, Oklahoma" - A McAlester apartment complex that received $726,122 in federal rent subsidies last year is plagued by a bed bug infestation, a News-Capital investigation shows… more.

Click2Houston: "Bed Bugs Infest Group Home for Senior Citizens in SW Houston" - The home on Knotty Oaks Trail near Orem and the Buffalo Speedway is called Our Father's House -- a nonprofit group home
box spring. If a bed bug is introduced to the room the active liner will kill any bed bugs that come into contact with the liner, generally within 72 hours and thereby helping to prevent a full blown bed bug infestation from occurring.

Free Liner Trial Program Gives PMPs Instant Access to ActiveGuard Mattress Liners

For a limited time, Allergy Technologies has implemented a ‘Free Liner Trial Program’ specifically designed for Pest Management Professionals to conduct a field demonstration to confirm the benefits of using ActiveGuard® in their bed bug treatment program. Do you have an ActiveGuard® story to tell?

Chico State The Orion: "Bed Bug Outbreak in University Village" - Residents of University Village, have been dealing with a bed bug outbreak that began the week of Jan. 4 and continues to be a problem. more.

Small Tweaks to Bed Bug Protocols Can Offer Long-Term Solutions

Just when you thought you had the bed bug problem under control they come back...again! What is going on? If bed bugs are back, is it because they were never eliminated in the first place? Or, has there been a new introduction of bed bugs? Regardless, the objective is to eliminate the bed bug infestation once and for all. So how can you ensure that you have fully eliminated bed bugs AND prevent newly introduced bed bugs from turning into a full blow re-infestation?

A little tweaking of the current bed bug protocol may be just the trick to help you achieve a permanent bed bug free environment. Consider the following for YOUR bed bug treatment strategy to prevent and control bed bugs once and for all. To read the full article, click here.

On The Road with Allergy Technologies in February
During the month of February 2015, Allergy Technologies' will be "On the Road" with presentations at several trade shows. Check below for a list of upcoming events:

- **February 3, 2015**
  - **Global Bed Bug Summit**
  - **Sheraton Denver Downtown Hotel**, Denver, Colorado
  - **Platinum Sponsor**
  - "The tone of the entire meeting appeared to be heavily focused on proactive strategies for bed bug prevention," said Joseph Latino, Chief Operating Officer, Allergy Technologies. "ActiveGuard® Mattress Liners typically kill bed bugs within 72 hours, and are perfectly positioned based on their mode of action and labeling to become the centerpiece around which a preventative program can be built," click here.

- **February 5, 2015**
  - **Northeast Pest Management Association's Annual Conference**
  - **Lake George, New York
  - "ActiveGuard® Mattress Liners are a preventative solution to the bed bug problem," said Joseph Latino, Chief Operating Officer, Allergy Technologies. "They are designed to kill bed bugs within 72 hours, and can be used in conjunction with other pest control methods to achieve long-term control."

An investigation uncovered dozens of complaints about bed bugs at hotels and motels in Cuyahoga County over the last two years. This as approximately 50,000 visitors are expected to need hotels when Cleveland hosts the Republican National Convention in July 2016 - more

**Bill to Promote Bedbug Awareness, Prevention Gains Assembly Approval in New Jersey**

Legislation Assemblyman Wayne P. DeAngelo and Assemblywoman Eliana Pintor Marin sponsored to increase awareness about bedbugs and prevent the spread of the pests in New Jersey schools received unanimous approval on Monday in the General Assembly.

The bill (A-2583) would require the Department of Education to produce and publish a bedbug fact sheet on its website. Information on the fact sheet would include: the dangers of bedbugs and how they spread, how to detect bedbug infestation, how to recognize symptoms of bites and ways to prevent and eliminate infestation. To read more, click here.

Allergy Technologies offers Preventative Solution to the Bed Bug Problem

Allergy Technologies, makers of ActiveGuard® Mattress Liners, a revolutionary mattress and box spring cover that kills bed bugs, was the Platinum Sponsor at last month's Global Bed Bug Summit. Approximately 400 of the country's leading pest management professionals, researchers and manufacturers were in attendance at the Sheraton Denver Downtown Hotel in Denver, Colorado from January 7-9, 2015. "The tone of the entire meeting appeared to be heavily focused on proactive strategies for bed bug prevention," said Joseph Latino, Chief Operating Officer, Allergy Technologies. "ActiveGuard® Mattress Liners typically kill bed bugs within 72 hours, and are perfectly positioned based on their mode of action and labeling to become the centerpiece around which a preventative program can be built," click here.
In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard® will create and secure more revenue for each and every bed bug job performed. The Bed Bug Authority

January 2015

Work Smarter, Not Harder

Work Smarter, Not Harder! That’s the lesson this month - focusing on doing your job a little better but without adding hours to the day. Read our lead article for several ways to “fine tune” your ‘work process’ in an effort to maximize efficiency! Also, this week is the National Pest Management Association’s (NPMA) Global Bed Bug Summit that will take place in Denver. If you plan on attending, make sure to stop by Allergy Technologies’ booth #413 to learn more about ActiveGuard®! We also take a look at the top bed bug stories from around the country, including Allergy Technologies’ ‘Free Liner Trial Program.’ If you are ready to put ActiveGuard® to the test in the field then this is a great opportunity to do so by adding both long term control and 2 year pro-active preventive features to your bed bug treatment strategies. As always, please share ‘The Bed Bug Authority’ with anyone interested in ‘all things bed bugs.’

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Daily-Astorian: "Eugene library searched for bedbugs after outbreak" - Two dogs sniffed around the Eugene Public Library late Saturday, looking for bedbugs. Luckily for patrons and staff, the beagles found none, and it's hoped a recent outbreak has been eradicated ...

KHQ6: "Spokane Family Battles Bed Bug Infestation" - We've all heard the saying, 'sleep tight don't let the bed bugs bite.' One Spokane family has had a really hard time doing that the last few months because the bed bugs have infested their house. Jon Bird said ...

Foster's Daily Democrat: "Apartment house battles bed bugs" - Kelli Haines has decided to move her mother out of a Preservation Park apartment after a battle with bedbugs. Haines said an inspection a month ago didn't show a problem, but then things got so ...

MyFoxNY: "Bed bugs found in subway cars" - While converting subway trains on the 6 line last week for use on the expanding 7 line, some MTA workers say they found something they never expected: bed bugs. Sources say workers were inside some ...

Work Smarter, Not Harder in 2015
though any bed bugs emerging from the mattress will not be killed as the encasement will act as a barrier preventing direct contact with the liner. ActiveGuard® works best when placed directly on the mattress and box spring surface. Once installed, the bed should be prepared as usual, which may include a mattress pad, sheets, blankets, dust ruffle and/or comforter. ActiveGuard® will work continuously and does not need to be disturbed for two years.

One of the big benefits of Allergy Technologies' ActiveGuard® Mattress Liner product is that it's designed as a proactive product - it's a way of helping PMPs work smarter against bed bugs rather than just working harder. There's a lesson to be learned for everyone no matter what your professional role may be; this article from lifehack.org is a very pertinent read! "Work harder! Work FASTER!!!" Remember that commercial? It featured an old man and an old woman, demanding that their employees produce more in less time. Sadly, this has to a large degree become the societal norm in many countries. People are expected to do more in less time with less resources and produce a better product on top of it all! Madness, you may think and you'd be absolutely right. To read the full article, [click here](#).

Video: What are bedbugs?

Made by a UK-based PMP, this fun video looks more like a movie trailer than a YouTube bed bug video! This video is about 'What are bedbugs'? Giving a description of how bedbugs look & the signs to look out for.

Look for bed bugs when traveling

Bed bugs are tiny and they hide easily, which makes them more difficult to detect. That's why 22News found out what they look like for you. At
Are you on Facebook? Is your business on it? Then feel free to connect with the Allergy Technologies’ Facebook page and we'll share information about ActiveGuard that you can share with your following! Just Like our Facebook page. Feel free to share it with your friends!

Do you have an ActiveGuard story to tell?

Allergy Technologies is looking for a few more PMPs who are using ActiveGuard® as part of their bed bug control and preventative strategies to profile as success stories. We’ll feature PMPs in various editions of 'The Bed Bug Authority.' Let us know how ActiveGuard® is helping your business make more money while killing more bed bugs. Braman, exterminators describe them as looking like apple seeds, and they said they feed only off blood. Michael Bensche at Braman told 22News the best way to avoid them is by checking under your hotel bed mattress and behind the headboard before sleeping. If you see blood spots or what looks like outer shells of bugs, those could be signs of bed bugs. To read more, click here.

REMEMBER: Global Bed Bug Summit - This Week

The Global Bed Bug Summit, featuring Platinum Sponsor Allergy Technologies, is designed to provide you with the information you need from a legal, technical, business and customer-oriented perspective so that you can not only eliminate the bed bug problem, but also create an environment of trust between you and your customer. Click here to view the conference program including registration information. The Global Bed Bug Summit will be held this week at the Sheraton Denver Downtown in Denver, Colorado.

On The Road with Allergy Technologies in January

During the month of January 2014, Allergy Technologies’ will be “On the Road” at:

- Jan. 7-9 Global Bed Bug Summit Denver, CO
- Jan. 7-9 Texas A&M Workshop College Station, TX
- Jan. 12 Greyson County Pest Conference Sherman, TX
- Jan. 12-13 Purdue Pest Management Conference West Lafayette, IN
- Jan. 13 Univar Rozell CEU Workshop Tyler, TX
- Jan. 13-15 Truly Nolen Conference Tucson, AZ
- Jan. 14-15 NPMA Eastern Conference Newport, RI
- Jan. 19 Residex Recertification Meeting Whitemarsh, MD
- Jan. 19-20 Target Specialty Conference Long Beach, CA
- Jan. 19-23 Florida Pest & Lawn Care Orlando, FL
- Jan. 21 Target Workshop Houston, TX
- Jan. 23 Target Workshop Arlington, TX
- Jan. 27-29 Louisiana Pest Mgmt. Conference Baton Rouge, LA
- Jan. 27-30 North Carolina Technician’s School Durham, NC
- Jan. 28-29 Interstate Pest Mgmt. Conference Linthicum, MD
- Jan. 29 Bed Bug Specialist Seminar Queens, NY

In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard® will create and secure more revenue for each and every bed bug job performed. Further, hear about
some tips and guides on establishing pro-active bed bug preventative programs, a new source of renewable income! If you are interested in learning more, please contact us at info@allergytechnologies.com to arrange a time to schedule a personalized presentation about *ActiveGuard® Mattress Liners and YOU!*

---

*ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all *ActiveGuard®* proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.*

*ActiveGuard® Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, *ActiveGuard®* should be considered as part of your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, *ActiveGuard®* is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.*

The Bed Bug Authority

December 2014

Global Bed Bug Summit Preview

Slated for the 2nd week of January in Denver (Jan 7-9, 2015), the National Pest Management Association’s (NPMA) Global Bed Bug Summit is positioned the premier gathering of bed bug researchers, product manufacturers, technicians and Pest Management Professionals (PMP). We hope to see you there. As always, we take a look at the top bed bug stories from around the country, including Allergy Technologies’ ‘Free Liner Trial Program’. If you are ready to put ActiveGuard® to the test in the field then this is a great opportunity to do so by adding both proactive long term control and 2 year preventative features to your bed bug treatment strategies. As always, please share ‘The Bed Bug Authority’ with anyone interested in ‘all things bed bugs.’

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Professionals will suggest that infested bedding be thrown away. This is because mattresses are sites where bed bugs and their eggs are hard to access and kill; many of these may be left alive even after a thorough treatment by a Pest Management Professional. ActiveGuard® may be used to salvage infested bedding as part of a treatment program or to protect bedding from future infestation because its unique formulation will kill hatched bed bugs even after the treatment is completed and continuously for two years.

Free Liner Trial Program Gives PMPs Instant Access to ActiveGuard Mattress Liners

For a limited time, Allergy Technologies has implemented a 'Free Liner Trial Program' specifically designed for Pest Management Professionals to conduct a field demonstration to confirm the benefits of using ActiveGuard® in their bed bug treatment program. Making a decision to revise your bed bug remediation strategy is complicated. Your clients depend upon you to provide the most effective program possible! PMPs strive to ensure customer confidence, business growth and income (both earned and retained). Allergy Technologies is confident that ActiveGuard® will perfect any program, both in active remediation and as the centerpiece in a pro-active preventative strategy. Video: BG Group Presents the Bed Bug Life Cycle

Learn more about the life cycle of bed bugs in this high-energy presentation.

Bed Bugs and Trypanosoma Cruzi (Chagas Disease)

A new research paper submitted to the American Journal of Tropical Medicine and Hygiene discusses the possible transmission of Trypanosoma Cruzi, the etiologic agent of Chagas Disease, via bed bugs. To review the paper, click here.

Editor's Note: The Bed Bug Authority does not opine or support the position or conclusions reported in any citation. While it is suggested that this paper offers evidence of the possibility that bed bugs may transmit the parasite known to cause Chagas disease, more research is necessary before any definitive inference can be drawn between disease transmittance and bed bugs.

Avoiding Bed Bug Nightmares This Holiday Season

This article by Herb Bolton, National Program Leader for Integrated Pest Management and Invasive Species, of the National Institute of Food and Agriculture, is part of the USDA's Science Tuesday feature on its blog. Here's a small excerpt:

Most are familiar with the phrase, "Sleep tight, don't let the bed bugs bite," but few people know what a bed bug looks like or problems they can cause. From World War II until just recently, bed bugs were not at all common in the United States. Bed bugs are now found in many homes, apartments, college dorm rooms, and even in public facilities such as theaters, hospitals, schools, and libraries. Now that bed bugs are back,

Housing agency faces bed bug lawsuit

Residents of Des Moines' largest public housing complex say they have been living for years with a bedbug infestation that has left them with sores, ruined furniture and sleepless nights. A class-action lawsuit filed Wednesday in Polk County District Court alleges the city's public housing agency put residents of Royal View Manor in "unconscionable and substandard living conditions" by failing to eradicate the bloodsucking insects or warn residents about the infestation. To read more, visit the Des Moines Register website.

Enhancing a Bed Bug Treatment Strategy

What does it mean to ‘Enhance’ a Bed Bug treatment strategy? It’s hard to discuss how product(s) can ‘enhance’ or ‘optimize’ a pre-existing strategy without first describing the primary treatment protocol. Most PMPs have a standardized protocol that they follow when there’s a bed bug infestation; this sequence of steps represent the company’s treatment strategy. For example, a primary inspection followed by treatment with heat or multiple chemical applications including a pro-active sustained residual product, i.e. ActiveGuard® Mattress Liners and active/passive monitors, followed by periodic inspections represents a treatment strategy. As always, please share ‘The Bed Bug Authority’ with anyone interested in ‘all things bed bugs.’

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

KMTV: "Dog sniffs out bedbugs scent at La Vista Junior High" - School officials say a bedbug-sniffing dog did not find any insects, but did detect their scent in areas inside La Vista Junior High. In an update to parents Wednesday evening, the ... [more]

KWWL: "Bed bugs on the rise in eastern Iowa"- Bed bugs are on the rise in eastern Iowa. The city of Dubuque's housing inspector, Bob Boge, said bed bugs are a regular problem, whereas they weren't when he started in his position some five years ago ... [more]

KSL: "What you should know about bed bugs in Utah"- Some people may know bed bugs from the children's rhyme, "Good night, sleep tight, don't let the bed bugs bite," but the blood-sucking pests are anything but cute and quaint. Bed bugs are a growing problem ... [more]

Enhancing a Bed Bug Treatment Strategy

Enhancing a bed bug treatment strategy can be done in a few ways, but none can make a difference without first examining the details of the treatment strategy itself. By following the core segments of a sound strategy - inspection, treatment, use of passive / active monitors, and follow-up inspections - PMPs can be sure to seek positive results. This program can be enhanced with the use of a pro-active sustained residual

Bed bugs' hangouts go beyond just beds

It is believed that bed bugs came initially from the Middle East and were carried back to Europe by the Crusaders. The history is a little sketchier regarding Asia, but they probably got there traveling along the Silk Road. Scientists believe they evolved from parasites of bats that moved to humans when we moved into the bat-infested caves. For thousands of years, they were restricted to warmer climates and...
gained a foothold farther north only when we began to heat our artificial houses efficiently. Today, they are found throughout the planet. Until the end of the World War II, bed bugs were a scourge in every nation on Earth, rich or poor. They didn't bother to discriminate. It was your blood they were after and your wealth or status didn't matter. Estimates were that one half of the homes in North America were infested, 75 percent in Europe. For more, click here.

Allergy Technologies’ FAQ: What is ActiveGuard?

ActiveGuard® Mattress Liners are patented and developed to kill bed bugs and dust mites on mattresses and box springs. Active mattress liners were derived from bed nets, used worldwide over the past 50 years to protect against mosquitoes and malaria. Originally designed as a simple and proactive alternative to encasements for control of house dust mites (long associated with asthma in children and adults), these active liners have been shown to be effective against bed bugs in lab and field studies, including those highly resistant field populations studied. ActiveGuard® is very easy to install - simply placed over the mattress and box spring just like a fitted sheet, they are held securely in place by the elastic sewn into the corners. The liners are thin, cool, comfortable, odorless and breathable. ActiveGuard® is maintenance-free...you'll never know they are working continuously 24/7 for up to two years. Just install it and let it work!

Put the industry’s most proactive solution for bed bugs into use in your protocol today, and learn how you can benefit!

Video: Bed Bugs

Bed bugs are a difficult problem to deal with!

You might not even realize you have them in your home. 22News explains how to spot bed bugs and what to do next.

Free Liner Trial Program Gives PMPs Instant product. Here’s an overview of prototypical treatment strategy for bed bugs:

**Inspection:** A thorough inspection will indicate the extent and degree of the infestation, and potentially, the source of entry. Be thorough and use as many tools as possible, such as magnifying glasses, flashlights, screwdrivers and credit cards for sliding bed bugs from small areas. If possible, a canine inspection can prove invaluable to detect low level infestations otherwise unseen by pest management professionals.

**Treatment:** Bed bug remediation can be costly endeavor and often is the ‘driver’ as to what approach is applied; some customers are very limited in their budgets despite the impact bed bugs have on their lives. Bed bugs are best treated by a multi-faceted approach often including chemicals (highlighting dust and particle formulations), heat, cold treatments, steam and physical removal with a vacuum. All aspects of treatment should be focused on containing the infestation from spreading, especially in a multi-housing unit by inspecting and often treating peripheral living units as well.

**Monitors / Inspections:** Use of active and/or passive monitors after treating a room will provide PMPs with a strong gauge as to the effectiveness of the treatment, both short and long term. Routine follow-up inspections (including canines, if possible) are important to review the treated facility once an infestation has been cleared ensuring against re-emergence of any bed bugs inadvertently missed throughout the treatment process.

Once a program is adopted by a PMP, it can be enhanced greatly with the use of a product like ActiveGuard® Mattress Liners - a preventative, proactive product that kills bed bugs within hours and keeps killing for two years! As the last line in protection and control, ActiveGuard is the perfect complement to securing 100% success in every treatment strategy. To learn more about ActiveGuard, click here. To learn more about treatment strategies, visit the site of Cornell’s New York State Integrated Pest Management Program by clicking here.
Access to ActiveGuard Mattress Liners

ActiveGuard® mattress liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women’s shelters and asthma clinics.

ActiveGuard Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

Video: New York Bedbugs Bite Back

The pest control industry sees rich spoils as New York City continues its battle against bedbugs.

Bed bugs Infest Manhattan Office, California Theater, NY Subway: What to Do

Bed bugs are back - well, actually of course they never left. But today the hard-to-eradicate pests really made headlines when the PIMCO office in Manhattan was evacuated and a movie theater in Lodi, California shut down due to suspected bed bug infestations. And in the last week we’ve seen bedbug infestations reported in the New York subway and a Charlotte, North Carolina senior living complex, among other places. Visit Forbes Online to read more.

**Do you have an ActiveGuard story to tell?**

Allergy Technologies is looking for a few more PMPs who are using ActiveGuard® as part of their bed bug control and preventative strategies to profile as success stories. We'll feature PMPs in various editions of 'The Bed Bug Authority.' Let us know how ActiveGuard® is helping your business make more money while killing more bed bugs. Email us [here](mailto:) to tell your story.

**What are PMPs saying about ActiveGuard?**

"After an extensive six (6) month study in over 250 rooms, ActiveGuard® Mattress Liners have proven to us to be a major tool in solving the issue of long term control of bed bugs in an assisted living environment. These liners have consistently killed residual bed bugs where they often seek harborage (bedding) and provide a persistent barrier to effectively control and eradicate newly introduced bed bugs safely and effectively, thus greatly reducing call backs. This additional control and preventative tool will prove to be a pivotal factor for us in achieving success in our bed bug treatment programs going forward. I am confident ActiveGuard® is the future of bed bug treatment, and we are proud to work with the Allergy Technologies team."-Anthony John, Operations Manager, M&M Pest Control (to read the full testimonial, [click here](mailto:))

August 2014

The Summer Vacation Season

As Americans are in the midst of one of heaviest vacation periods of the year - early July to mid-August - the resulting effect that Pest Management is noticing industry-wide is that bed bugs are traveling just about everywhere as well! Read our lead story to learn about some of the more unique spots that have been hit by bed bugs recently!

Also, read about the hot bed bug news from around the country and how a new survey ranks Indianapolis as the 13th hardest hit bed bug city in America! As always, please share 'The Bed Bug Authority' with anyone interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

ABC Detroit: "Bed Bugs discovered at Detroit Medic EMS unit and in ambulances" - A pest problem has been discovered at a Detroit Medic EMS unit, and right now the place is off limits. The sign on the door at Medic 4 on Detroit's west side serves as a warning ...

NOLA.com: "Bedbugs a fact of life in Louisiana (and everywhere else), experts say" - Debra Caine traveled to New Orleans last summer seeking a pre-wedding girls’ getaway. She imagined a fun-filled three days of dining and shopping with her niece. But by the time the pair ...

Gazette-Mail: "Bed bug infestation 'brought me to the brink of insanity' " - A Kanawha County woman had no idea what was causing the welts that first appeared on her daughter's back in April. At first, Leslie (not her real name) thought the 12-year-old had an attack of hives or ...

NBC Tampa: "Bed bugs crawl into Tampa hotel guest's nightmares" - Allegheny Marcus Williams was staying in a hotel in Tampa with his wife when he woke up at 1 a.m. itching with bites all over his body. Williams says after he woke up he found bedbugs ...

It's True: Bedbugs are Everywhere

Normally, animal invasions make me want to break out the buttered popcorn. Okay, so maybe you haven't watched this summer's joke disaster film Sharknado 2: The Second One (wherein sharks impossibly attack an airborne plane), but Hitchcock's 1963 suspense The Birds is still considered an entertainment classic.

It's entertaining, alright, until it's happening to you-in real life. Then it's just outright horrifying. Especially, say, when it comes to bedbugs. New York

July 2014

Bed Bug Ordinances

Like most major cities throughout the country, in Chicago, bed bugs are the real deal - so much so the Windy City was voted as the worst city in the country for bed bug occurrences this year! Rather than being satisfied with that moniker, the Chicago City Council passed a powerful bed bug ordinance last year effectively passing much of the remediation responsibility onto the financial shoulders of the landlord or property owner. This month we look at how a preventative program might be able to help prevent future infestations and thus reduce future bed bug treatment costs for the landlord! As always, please share 'The Bed Bug Authority' with anyone interested in ‘all things bed bugs.’

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Ozarks First: "Bed Bugs Are Biting" - Bed bugs forced a hospital to temporarily close a waiting room. It happened at Cox South in Springfield. An exterminator treated the waiting room today. We wondered how common bed bugs are, and how to deal with them ... more.

KIMT: "Babies R Us investigating bed bug complaint" - If you plan on doing any traveling anytime soon, you might want to take note. The Centers for Disease Control and Prevention along with the U.S. Environmental Control Agency is saying the United States ... more.

NEWSNET 5 TV: "Cleveland family hit by bed bug attack at rental home" - Olivia Lawrence and her two children thought they were renting a nice home on Cleveland's east side, but a bed bug infestation at the house has left them scrambling to take cover. Lawrence, and her ... more.

WTAE TV: "Health officials investigate bed bugs at Shadyside nursing home" - Allegheny County health officials are investigating a Shadyside nursing home after receiving complaints about bed bugs. Officials with ManorCare Health Services said the facility in the ... more.

How Prevention Could Support Bed Bug Ordinances

A little more than one year ago the City Council passed the Chicago Bed Bug Ordinance to combat the problems associated with eradicating this pest once discovered.

While the ordinance did place a small amount of responsibility onto the shoulders of the tenants, it is the landlords and property owners who now must maintain the majority of the responsibility for bed bug problems. Here's a link to the actual Chicago ordinance.

For instance, tenants must provide written notification of any bites to the
landlord and cooperate with any eradication efforts, it is the landlord that not only has to "totally eliminate" the problem by hiring a pest management firm but they need to inspect all neighboring units for the problem, as well. This can easily become a costly measure for the landlord or property owner.

One way to attempt to reduce the cost of bed bug infestations is to try to prevent them in the first place with a proactive program. Once a room is deemed "bed bug free" or has been treated by a PMP, the use of ActiveGuard® Mattress Liners is a preventative measure that allows both the tenants and landlords to work together to stop future infestations from occurring before they do! To learn more, read our blog entry.

**ABQ Motel Sued Over Bed Bugs**

An Albuquerque, New Mexico hotel is being sued over a bed bug infestation.

**Judge Approves $2.45 Million Bed Bug Settlement**

A Polk County District Court judge approved a $2.45 million class-action settlement against the operators of two downtown Des Moines apartment towers whose low-income and disabled residents endured an infestation of bedbugs. The settlement's approval marked the final chapter of a legal battle for about 225 people who live or once lived at Elsie Mason Manor and Ligutti Tower. For more, read the Iowa City Press-Citizen.

**Avoid Hitchhiking Bed Bugs While Traveling**

Do you like to travel? It turns out that bed bugs do, too. With summer just around the corner, family vacation season will soon be in full swing, and that means being prepared to avoid picking up any unwelcome passengers. To learn more, read the Norman Transcript.

How to Check for Bed Bugs

According to the Centers for Disease Control and Prevention (CDC) and the U.S. Environmental Protection Agency (EPA), the United States is experiencing an alarming increase in the number of bedbug populations. In addition to being found in private residences, such as apartments and single-family homes, bedbugs are increasingly affecting restaurants, hotels, hospitals, and schools and day care centers. To read more, visit the Epoch Times.

June 2014

Bedbug Population Booming Across U.S.

This month's issue we look at bed bugs from the perspective that they are ubiquitous; literally, they are everywhere in the United States! While there are companies like Orkin that assemble a top 15 list of hardest hit cities, there's still a plethora of bed bug issues throughout the remainder of the country and this month we're documenting some of the most egregious. In the old Klondike Kat cartoons of the 1960s, Klondike was a feline Mountie who was chasing a French-Canadian mouse named Savoir-Faire, who would search high and low to steal food and whose trademark line was "Savoir-Faire is everywhere!" Well guess what...so are bed bugs! As always, please share 'The Bed Bug Authority' with anyone interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

KNOP TV: "Library Reopens" - The North Platte Public Library is now open again. After discovering bed bugs in two pieces of the furniture at the library last week, the city was forced to close the building. An extermination spray was done on every chair as well as ...

The News-Herald: "Babies R Us investigating bed bug complaint" - The last thing a parent wants to see in a brand new baby product is an insect - let alone three insects. That's exactly what Natalie Lorenz said she encountered in a product she purchased at Babies R Us ...

WESH TV: "Residents complain of bed bugs, non-working elevators" - Bed bugs, uneven stairs, and an elevator that hasn't worked in five months. Some residents of the Remington Inn and Suites in Altamonte Springs are fed up and are calling the non-working elevators ...

AZ Central: "Tenants bear motel, medical costs in bed-bug infestation" - Photos show nasty bed-bug bites on Jasmine Swift and her mom. They say the problem began a couple weeks ago, and it got so bad, they had to leave their unit at North Village Apartments in Phoenix ...

Frequent business traveler Neil Kelley says bedbug bites were "all over my legs," and he was awakened in the middle of the night by a cockroach that crawled across his face at a resort two years ago. "I itched like crazy," recalls Kelley, who was attending a food industry conference and volunteers information as a USA TODAY Road Warrior. "I would never go back to that hotel." Staff at many hotels have heard guests like Kelley complain about bedbugs. To read the full article, click here.

The Bed Bug Tattoo Gun:
1,000 Bed Bugs Feeding at Once

A five-year old video has surfaced thanks to Science Channel's Outrageous Acts of Science program and it has taken the news media by storm. The video above is the original one posted by the student who utilized the "bed bug tattoo gun" and here's to a May 2014 USA Today story that highlighted the video.

Bed Bug Battle Heads to Court

It seems a battle over bed bugs is pitting a local renter against her landlord. Now, a Fayetteville (Arkansas) woman is taking her fight to a jury. "Those bugs are crawling on you while you're sleeping and you don't know about it," says Tessie Tull. "I have scars on my arms, all over my
Are you on Facebook? Is your business on it? Then feel free to connect with the Allergy Technologies’ Facebook page and we'll share information about ActiveGuard that you can share with your following! Just Like our Facebook page. Feel free to share it with your friends!

Local Bed Bug Ordinances Popping Up Around the Country

Are bed bugs a private problem or a regulatory one? In many metropolitan cities around the country - and several smaller villages and towns too - the need to eradicate bed bugs properly is being put into writing to ensure that Pest Management Professionals are brought in when landlords are contacted about bed bug infestations. These bed bug protocols have been making their way from the idea phase to becoming approved legal ordinances in cities like Chicago, Detroit, Jersey City and Portland, Maine.

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

ActiveGuard Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

Summer's Coming

"Summer's Coming"...what does that mean for you and your family? Students returning home from college; families starting the vacation boom; children launching summer camps; and, business travelers continuing the busy travel season. However, what does this mean for bed bugs? A huge opportunity for these uninvited pests to be shared in some of the seasonal and more "transient" living arrangements such as hotels, motels, camp bunks, dorm rooms and even right at home. As always, please share 'The Bed Bug Authority' with anyone interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

WMC TV: "Motel 6 bed bugs bite child" - A young girl was bitten by bed bugs in a Mid-South motel, and her mother wants answers. They were staying at the Motel 6 on Austin Peay Highway. Shelby County Health officials say there have been a total of 15 bed bug ... more.

Chaffee County Times: "Bedbugs cause furor during Leadville school trip" - Signs of bedbugs were discovered in a cabin several Lake County Middle School eighth-grade students were staying in during a trip to the Keystone Science School. One bedbug was discovered on ... more.

Fox 10: "How to avoid bed bugs!" - When you were little and your mom used to tuck you in and say, "sleep tight don't let the bed bugs bite," it was comforting. But now that we're older we know bed bugs are real! Thomas Hodges is the Branch Manager of Terminix in Mobile ... more.

CBC News: "Bedbugs discovered at Yellowknife's Stanton Hospital" - A Staff at Stanton Hospital in Yellowknife found two bedbugs in two different rooms about a week ago. "The staff lounge and the male locker rooms were immediately closed," says Dr. Anna Reid ... more.

The Complete Guide to Managing Your Summer Pest Problem
Summer brings fun, sun, and unfortunately—lots of annoying bugs. If you've got the pests that come with the season, you don't have to go through great lengths to rid your home of them. A few DIY methods and inexpensive tools can do the trick. Back when I lived in Boston, I rarely dealt with summer pests—or pests in general. They almost never make their way up a multi-floor building unless you entice them with sweets and other goodies they love so much. To read the full article, click here.

Bed bugs are calling Alaska home at increasing rates
Tiny, flat insects are scurrying around Alaska, hiding in furniture and sucking human blood at increasing rates, health officials say. Bedbugs aren't so much a health hazard as they are a public nuisance, and their proliferation in recent years prompted the state Department of Health and Social Services to issue a bulletin Tuesday, alerting residents of their potential new roommates. To read the full article, visit the Anchorage Daily News.

On The Road with Allergy Technologies in May
During the month of May 2014, Allergy Technologies' will be "On the Road" at:

- May 4-7 Southeast Pest Management Conference, Gainesville, FL
- May 7 Univar 13th Annual Invitational Golf Tourney, Deluth, GA
- May 29 Maryland PCA Last Chance Recertification and Exhibitor Meeting, Linthicum, MD

In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard will create and secure more revenue for each and every bed bug job performed. Further, hear about some tips and guides on establishing pro-active bed bug preventative programs... a new source of renewable income! If you are interested in learning more, please contact us at info@allergytechnologies.com to arrange a time to schedule a personalized presentation about ActiveGuard Mattress Liners and YOU!
April 2014

Spring Cleaning

It is again time to focus on spring cleaning - the time-honored tradition of cleaning out bedrooms, living and family areas, basements ... all with the hope of getting rid of the clutter we've managed to accumulate over the winter. But cleaning your home is more than just organizational management, in many ways it's part of a pro-active preventative pest control strategy. In this issue we focus on how a spring cleaning can significantly reduce your chances of having bugs invade your home and subsequently establish residence as the weather starts to warm up. As always, please share 'The Bed Bug Authority' with anyone interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

KRCG13: "Bed bugs bother Dulle-Hamilton residents" - Residents in two Jefferson City affordable housing complexes, along with the city's housing authority, are battling a major problem; bed bugs. Sandy Meier, who has lived in Dulle Tower for over four years ... more.

CBS58: "Renters claim bed bug infestation at local apartment building" - Some renters say they got a nasty surprise after moving into a Milwaukee apartment building. They say 8405 Northridge Court is infested with bed bugs and the landlord is doing ... more.

WCF COURIER: "Bed bugs shut down Catholic shelter, costs deplete coffers" - A bedbug infestation compromised living spaces for the homeless staying at St. Francis Catholic Worker House this week but the cost to clean it up has drained their coffers. The nine-bed ... more.

Spring Cleaning 2014: Getting Rid of Bed Bugs (From our Canadian Comrades)
Now that the holidays are over and 2014 has kicked off, the temperatures should be rising soon. In just a few short weeks, temperatures will once again rise into the double digits, heralding the beginning of spring and increased activity for all inhabitants. The temperature change also inspires homeowners to begin spring cleaning—the age-old practice of cleaning a home from top to bottom. Spring cleanings typically last a couple of days, during which homeowners will thoroughly clean every room. If you’re undertaking a similar endeavor this spring, you’ll want to pay special attention to a couple of rooms in your home this spring: bedrooms, living rooms, and dens. To read the full article, visit the Truly Nolen website.

2014 Victim Bed Bug Blogger Edit

2014 Bed Bug Victim Blogger Edit

Ron Harrison, technical services manager for Orkin, discusses how bed bugs affect the life of a customer and what needs to be done to eradicate them.

Cincinnati’s bed bug ranking prompts leaders to take action

Just weeks after Cincinnati was yet again ranked one of the worst cities in America for bed bugs, city leaders met Thursday for an emergency meeting to talk about the epidemic. Ohio State. Rep. Dale Mallory convened the emergency Joint Bed Bug Task Force meeting at 5 p.m. Thursday at the Theodore M. Berry Center at 880 W. Court St, where he spoke with health officials and pest control leaders. To read more, click here.

How to Do a Bed Bug Inspection

Bed bugs can be hard to find and difficult to identify. Even after a thorough inspection sometimes it can still be difficult to identify a bed bug infestation. To learn how to perform one, read more, click here.

Student Housing Apartment Infested with Bed Bugs

Nationwide bed bug lawyer Craig Dell filed suit against Campus Advantage, Inc. and CCAL 4050 Rocky Circle Road LLC. According to a release, the lawsuit alleges they took ineffective actions in detecting and treating a bedbug infestation at the University of South Florida and Hillsborough Community College in Tampa, Florida. January 2014

Preventative Strategies

With the start of the 2014 New Year, resolutions are established and new goals develop. Many take a 'pro-active' approach to planning on how to implement these changes. Pest control is no different than life in general; taking a thoughtful pro-active approach is rewarding and beneficial; that's why we place an emphasis this month on Preventative Strategies. We start by highlighting a new learning module called the "Revenue Booster," a practical new guide including bed bug preventative strategies from Allergy Technologies.

Make sure to read about how you can download your free white paper and receive free personalized assistance in improving your customer experience while making more money by focusing on preventative pest control! As always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

New Zealand Herald: "Motel bed bugs bite woman 300 times" - A woman suffered a painful allergic reaction after being bitten 300 times by bed bugs at an Auckland motel. Debbie Roome, 44, flew to the city for a friend's graduation on December 15 and checked into ... more.

Preventative Strategies Take Center Stage as Part of Allergy Technologies' New Revenue Booster Program
soil of an ancient earth. Mounds rise like incense ash—the remnants of prayers on my skin in cold welts. Generations have worshipped. A nocturnal pilgrimage to my body is all some know. It's only now that I understand..."

Lucian Mattison is currently enrolled in the creative writing MFA program at Old Dominion University. To read his full poem, Asleep Atop Bed Bugs, click here.

One benefit to utilizing pro-active products as part of an overall preventative strategy is that it gives Pest Management Professionals the ability to truly claim that their services are more than simply a reactionary 'knee-jerk' to a client complaint. An even broader benefit to taking this approach is the ability to make more money by introducing novel approaches that include renewable income. This is the essence of Allergy Technologies' Revenue Booster Program!

PMPs visiting Allergy Technologies' Revenue Booster website are learning how to make more money with ActiveGuard® Mattress liners, the industry's most pro-active bed bug bedding solution. PMPs watch a video showing the product's performance attributes and then they are given a free downloadable white paper report that details the benefits of increasing revenues by implementing novel preventative strategies. Following this process entitles the PMP to a free personalized one-on-one meeting with an ActiveGuard® specialist to tailor individualized bed bug treatment and preventative programs specific to the PMP's practice and client base.

To learn more how you can take advantage of preventative strategies while increasing revenues, visit the Revenue Booster page that is also found on the Allergy Technologies' website.

On The Road with Allergy Technologies
In January

During the month of January 2014, Allergy Technologies' will be "On the Road" at:

- Purdue Pest Management Conference - Jan. 6-8, West Lafayette, IN
- Georgia Pest Control Association - Jan. 14-16, Athens, GA
- Univar Rozell CEU Workshop, Jan.14, Tyler, TX
- Mississippi Annual Convention (MPCA), Jan. 15-16, Jackson, MS
- Target Specialty - 2013 Annual Conference and Awards Program, Jan. 15-16, Cerritos, CA
- Florida Pest and Lawn Care, Jan. 20-24, Orlando, FL
- Target Annual Winter Conference, Jan 21, Houston, TX
- Annual Smoky Mountain Conference, Jan, 21-22, Pigeon Forge, TN
- Eastern Conference NPMA, Jan. 21-23, Tarrytown, NY
- NCPMA Pest Control Technicians' School, Jan. 27-30, Research Triangle Park, NC
- Chemtech Annual CEU Conference, Jan. 28, Mesa, AZ
- Louisiana Pest Management Conference, Jan. 28-30, Baton Rouge, LA
- Certified Bed Bug Course - NYPMA, Jan. 29, Queens, NY
- Interstate Pest Management Course, Jan. 29-30, Linthicum, MD
- Southwestern Conference-NPMA, Jan 29-30, Albuquerque, NM
- Nevada Pest Control Expo 2014, Jan. 31, Las Vegas, NV

In addition, our sales representatives will be making personal presentations to pest management firms and our network of distributors throughout the country on how ActiveGuard® will create and secure more revenue for each and every bed bug job performed. Further, hear about some tips and guides on establishing pro-active bed bug preventative programs... a new source of renewable income! If you are interested in learning more, please contact us at info@allergytechnologies.com to arrange a time to schedule a personalized presentation about ActiveGuard® Mattress Liners and YOU!

Prevention and Control of bed bugs in residences

Bed bugs, *Cimex lectularius*, have resurfaced to quickly become a very important pest of the 21st century, as they invade numerous urban areas. Our society has had a 30+ year "vacation" from this pest, when bed bugs were almost completely removed from North America as a result of mass treatments with older types of insecticides (DDT, Chlordane, Lindane).

Recently though, bed bugs have found ample opportunity to increase in numbers and spread through society. Their success is a result of a combination of factors: increased travel of people; improved treatment methods that specifically target other insect pests (and thus not impact bed bugs); and the lack of public awareness. In addition to homes and hotels, bed bugs are also being found in schools, retail facilities, office buildings, libraries, and other public areas.

In this article, Dr. Stephen A. Kells, Assistant Professor, and Jeff Hahn, Extension Professor, of the University of Minnesota's Department of Entomology discuss the prevention and control of bed bugs in residences.

To read the full article, visit the University of Minnesota website.
One product that I failed to mention when I was listing the Top Products of 2013 is ActiveGuard® Mattress Liners. This product has made so many people be able to fulfill the saying, "good night, sleep tight, and don't let the bedbugs bite" that it is unreal. ActiveGuard® Mattress Liners also control dust mites that can trigger asthma.

ActiveGuard® Mattress Liners were developed as an extension of the globally use mosquito nets (many of which Bill Gates has funded to wipe out malaria).

To read more from Bill Lamson-Scribner's article, visit his blog.

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

ActiveGuard Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners' two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

We've reached the final issue of our 2013 e-newsletter and we are proud to share a new video from PestWorld 2013 in which Dr. Susan Jones of The Ohio State University and Dr. Jim Ballard of Ballard Pest Management Consulting spoke to PCT Magazine about research involving ActiveGuard® Mattress Liners - make sure you watch it!

Although the Holiday Season stir thoughts of family and friends, the importance of bed bugs and treatment protocols was never more highly evidenced than by NPMA's Global Bed Bug Summit held in Denver last week at the Sheraton Downtown Hotel. As always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

Research Video Spotlight:
Dr. Susan Jones & Dr. Jim Ballard Discuss the Benefits of ActiveGuard Mattress Liners

The Bed Bug Summit: held in Denver last week at the Sheraton Downtown Hotel. As always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

Dr. Jim Ballard, president of Ballard Pest Management Consulting, reviews the new EPA label for ActiveGuard® Mattress Liners, which removes restrictions from its use, while Dr. Susan Jones, Ohio State University, discusses some of her department's research with ActiveGuard®, including findings that the liners demonstrate no repellency toward bed bugs.

The researchers were interviewed at the National Pest Management Association's (NPMA) PestWorld 2013 Trade Show in Phoenix in October. The video gives strong insight from independent experts in support of ActiveGuard® Mattress Liners as a pro-active tool for preventing future bed bug infestations when featured in an overall comprehensive integrated pest management program.

Watch the video on PCT Online.
Entomologists. The certifications take place throughout the year and are announced by the trade publications. To review this recent list of new ACEs and BCEs, visit PCT Online.

2014 World of Insects Calendar Available Now

The ESA 2014 World of Insects wall calendar is now available for purchase. More than 400 photos from 84 photographers were submitted for the calendar by insect photographers from around the world, and the ESA calendar committee judges picked the best ones. Visit here to order.

New York's DFS Battling Bed Bugs

Employees at the New York Department of Financial Services building, located on State Street, are complaining about bed bugs, the Daily News reports. Senior Insurance Examiner Ademola Oluwo, told the Daily News he obtained internal agency memos showing the State Street problem wasn't new. The complex had a bedbug problem before DFS started transferring employees there earlier this year from 25 Beaver St. while merging its banking and insurance divisions. To read more, visit PCT Online.

Do you have an ActiveGuard story

WBTW: "Bedbugs prevent homeless from staying at shelter at Myrtle Beach" - Tuesday night a homeless shelter in Myrtle Beach was forced to close its doors due to a bedbug infestation. Kathy Jenkins, executive director of New Directions the organization that runs Street ... more.

PCT: "Researchers Examine Effectiveness of DIY Bed Bug Products" - Rutgers' Changlu Wang and his research team have been studying the effectiveness of products such as mothballs and rubbing alcohol, and Wang reported on these findings at this month's Entomology ... more.

WVEC: "Bed bug infestations at fire stations cost Norfolk more than $30K" - The City of Norfolk spent more than $30,000 after finding bed bugs in five fire departments across town. A 13News Now investigation first reported the problem in mid-October, when the department had learned ... more.

This Holiday Season, Don't Let the Bed Bugs Bite!

Once you get past the weather, one of the biggest travel problems you could run into could be waiting at your destination...bed bugs. Bed bugs can be found in places beyond just a bed; you can find them in buses, planes, luggage and even clothing. These bugs have been found in five-star hotels, and their presence is not always determined on the cleanliness of the conditions where they are found.

They look like an apple seed, flat and brown, and they feed on human blood. They're most commonly found in places people sleep and among people who travel, but everyone is at risk to let the bed bugs bite.

"They're hitch hikers, that's how they get from place to place. So they're going to hitchhike on you if you're in a car, you're on a bus, plane, train, however you're traveling, that's where they can typically be," says Mike Coffey of Lane's Professional Pest Elimination.

To read the full WMBF article, visit the Allergy Technologies' blog.
Public Housing Authority Sued Over Bed Bug Claims

Waukegan, Ill.'s public housing agency faces a federal class-action lawsuit alleging that officials took ineffective action against a burgeoning bedbug infestation in a housing project, the *Chicago Tribune* reports.

The suit filed by three residents of Harry Poe Manor claims the 155-unit tower still harbors the bloodsucking insects whose bites, often delivered while people sleep, can irritate and inflame skin. The suit filed Friday in Chicago federal court seeks class-action status to represent the building's current residents and those who have lived there during the alleged infestation.

PestWorld 2013 Recap

Phoenix provided a scenic and welcoming backdrop for PestWorld 2013 late last month, and as a result there was a tremendous turnout from both industry exhibitors and attendees who flocked to The Grand Canyon State to mingle. With presentations from renowned researchers like Drs. Susan Jones (The Ohio State), Phil Koehler (Florida) and Michael Potter (Kentucky) and an exhibit hall full of pest control's best manufacturers and distributors, it's not hard to characterize this annual event as a huge success. Read more about the show and check our photo gallery below. This month's e-Newsletter also reviews the latest notable bed bug news and looks ahead to next month's big event, the Global Bed Bug Summit in Denver. As always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

Fox13Now: "Exterminators work to clear bed bugs from U of U library" - It's been a working weekend at the University of Utah, where exterminators are eradicating bed bugs in the J. Willard Marriott Library. Students encountered locked doors at the library Sunday, but a note on the door ... more.

Herald Sun: "Pest control firms turn to dogs to fight bed bugs" - Other than seeing them in the lab, the president and part-owner of Durham-based Clegg's Termite & Pest Control could only remember seeing one bed bug in an approximately 30-year span. "Now they're everywhere," said ... more.

PCT: "NPMA Members Approved Changes to Bylaws, Repeal Constitution" - The National Pest Management Association's 80th Annual Membership Meeting was held Friday morning here with significant results - the group repealed the NPMA Constitution and approved a ... more.

NP Telegraph: "Bed bugs leave some without public transit" - The superintendent of the city's transportation department said Friday that the city will not pick up people from the Liberty House due to a bed bug outbreak. "We are no longer transporting [from Liberty House] because we ... more.

management courses related to the business of bed bugs. The Global Bed Bug Summit will be held December 5-6, 2013 at the Sheraton Denver Downtown Hotel in Denver, Colorado. Allergy Technologies LLC, manufacturer of ActiveGuard® Mattress Liners, is the Platinum Sponsor for the event, which is a merger of Bed Bug Central's North American Bed Bug Summit and NPMA's Bed Bug Forum. For more information, visit NPMA online.

Allergy Technologies Add Another Hire!

Allergy Technologies is pleased to announce the addition of Don Wilson as the Company's newest sales representative for the Mid-Atlantic Region. Don has extensive experience in pest control supply sales and is a welcome addition to an already formidable and robust national sales force spearheaded by Dave Buzzelli as the Company's National Sales Manager. Wilson joined the team in October, cut his 'ActiveGuard teeth' at PestWorld, and will be attending the Global Bed Bug Summit, sponsored by Allergy Technologies, in Denver in December.

Orkin Entomologist (Bill Lawrence, PhD, BCE) explains features of bed bugs plus usually hiding places of the insect.

Feature Article: Phoenix Provides a Great Backdrop for Pest Management's Annual Gathering: PestWorld 2013

At the PestWorld 2013 Final Night Banquet, about 700 guests dined on Caesar salad, steak and dessert, danced with old friends and new to music of the 80s to today, and bid on Live Auction items to raise more than $18,000.

After thanking NPMA, Dan Carrothers of BASF, who sponsored the event, said, "I have been a big supporter of NPMA for many, many years. They are the rising tide that lifts all our boats." About BASF, he said, the most important thing we can do is keep being innovative. That's our job at BASF - to keep bringing innovation to you that makes you successful." To read more, visit the PCT website.

On The Road with Allergy Technologies in November

During the month of November, Allergy Technologies’ will be "On the Road" at:
"Ask Mr. Thomas" Honored with Hall of Fame Induction

Dr. Claude Thomas, of Lindsey Pest Services "Ask Dr. Thomas," was honored on Tuesday evening, October 22, with induction into the PMP Hall of Fame Class of 2013 at the National Pest Management's Annual PestWorld Conference. Dr. Thomas was recognized by PMP magazine for his "34 years of industry experience [that] has made him a respected pioneer of practical industry research and technological experience." Consumer Affairs: "Bed Bugs Causing Problems for Lynchburg Residents" - Lynchburg residents in low-income housing have been battling an enemy that's relentless. Bed bugs have infested one apartment building and are causing major problems ...

Active Multimedia: How to prevent the spread of bed bugs - North Carolina Agriculture
Summit’, an educational conference and expo designed to provide advanced technical training as well as management courses related to the business of bed bugs. The Global Bed Bug Summit will be held December 5-6, 2013 at the Sheraton Denver Downtown Hotel in Denver, Colorado. Allergy Technologies LLC, manufacturer of ActiveGuard® Mattress Liners, is the Platinum Sponsor for the event, which is a merger of the North American Bed Bug Summit and the Bed Bug Forum. For more information, visit NPMA online.

Ancient Pest, the Bed Bug, Faces New Scrutiny

New research on common household pests is gravitating toward another household nuisance: bed bugs. Mark Siddall, curator of invertebrates at the American Museum of Natural History in New York, is working with a team of a dozen researchers, including Fordham University’s Sergios-Orestis Kolokotronis, on a yearlong study to map the genomes of cockroaches and bed bugs. They hope to figure out the insects’ evolutionary history.

How to prevent the spread of bed bugs

Bed bugs have been in the news a lot lately. They are spreading across the state and the nation. But you can help control their spread and, more importantly, you can keep them out of your home. The information presented here will help you protect yourself, your family and your home from becoming infested so you can... keep the bite out of the night! (from the North Carolina Department of Agriculture)

Feature Article: PestWorld Invades Phoenix, Arizona from October 21-25, 2013

If the event itself isn't worthy enough to get you to attend, maybe National Pest Management Association's description of it is a little more enticing?

"Desert character. Phoenix still has cowboys, red-rock buttes, and the kind of cacti most people see only in cartoons...not to mention spends 85 percent of its daylight hours basking in the sun. What better place to host PestWorld 2013 than the gateway to the Grand Canyon?"

PestWorld 2013 will bring the industry's top manufacturers, Pest Management Professionals (PMPs), industry researchers and a variety of other professionals to one location in an effort to increase education, awareness and protocols for everything from bed bugs and ants to flies and ticks ... and everything in between!

The trade show will be hosted at the Phoenix Convention Center from October 21-25, and during that time more than 80 hours of educational sessions will be offered. In addition, valuable exhibitor hours will be held to offer students, professionals and researchers the opportunity to visit with manufacturers and discuss both new and existing products. To learn more or to register for PestWorld, visit NPMA's website.

On The Road with Allergy Technologies in October

During the month of October, Allergy Technologies’ will be “On the Road” at:

- University of Kentucky Pest Control Short Course - October 1-3,
pretty much the same as they did millions of year ago,” Dr. Siddall said. “But they’ve grown up with us, almost like companion animals.” To learn more, visit the Wall St. Journal website.

**Univar Opens Pro Center in Springfield, VA**

Univar Environmental Sciences announced the opening of a new Pro Center in Springfield, Va. The new Pro Center location has a full service call display area and built in classroom. The facility is located 15 miles from Washington, D.C., and is convenient to Alexandria, Arlington and Fairfax. To learn more, read the full article on PCT Online.

**Penn State Providing Free Bed Bug Workshop**

There will be a workshop on Oct. 4 from 8:30 a.m. to 4:30 p.m. in the Pondera Medical Center basement conference room concerning the subject of bed bugs. This web based training, using the Reach Network, will be presented by a Bed Bug Specialist from Pennsylvania State University. There is no charge for this workshop.

This workshop will address comprehensive control of bed bugs in housing using Integrated Pest Management, including: identification, biology and behavior, and control measures, both effective and ineffective. It is directed toward property managers and facility staff, pest management professionals, non-profit agencies that work with tenants, and representatives of tenants groups.

Please RSVP, not required but appreciated, with Corrine Rose at the Pondera County Health Department at 406-271-3247 so that the adequate amount of hand-outs can be provided. Feel free to attend all or portions of this workshop.

**Allergy Technologies' Bed Bug Supplement Coming in PCT's October Show Guide Issue**

Allergy Technologies, home of ActiveGuard® Mattress Liners, will have a comprehensive 8-page supplement in the October PestWorld Show Guide issue of PCT Magazine. The supplement, which coincides with the annual gathering at PestWorld, provides a technical perspective at the history of active mattress liners with a look at “The Genesis of Insecticide-Impregnated Fabrics” while also delivering a wealth of information about “Resistance in Bed Bug Populations.”

The insert, available in the PCT PestWorld Show Guide, authored by Jim Ballard, PhD, was developed to provide the industry with more detailed and researched information about bed bugs, resistance and the role impregnated liners play in development of strategies to control and prevent bed bug infestations. Look for it in PCT's October 2013 PestWorld issue.
Allergy Technologies Announces Three New Sales Hires

Allergy Technologies is pleased to announce the hiring of three new full time sales professionals, including Dave Buzzelli as the Company's National Sales Manager; Eve Pappas as its East Coast Sales Representative and Michael Goza as its West Coast Sales Representative. For the past twenty+ years Dave Buzzelli has had an extraordinary track record of sales accomplishments with notable companies such as AGREVO, Aventis, BASF and DuPont. Eve Pappas has over thirty years of pest control managerial and operational experience garnered through her work with Orkin and most recently Viking Pest Control. Mike Goza has a wealth of experience in pest control from distribution, management and manufacturing sectors over the last twenty-five years, with companies including Univar, MGK and Terminix.

Our expanded sales team, spearheaded by Dave Buzzelli, completes a nationwide network of sales representatives for Allergy Technologies. The development of this integrated team is to support and enhance sales opportunities for the array of distributors with which the Company has the pleasure of partnering. "Allergy Technologies continues to advance to new levels in marketing, distribution and now sales," said Joseph Latino, Chief Operating Officer (COO). "We're looking forward to a robust fourth quarter and an even greater 2014."

ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

ActiveGuard Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

Bed Bugs
Numbers Don't Lie

This month we look at how the 'Bugs Without Borders' survey results highlight the fact that bed bugs are in every aspect of community life; from schools and hotels to residences and public housing, and beyond! In addition, we tell you about the new 'Global Bed Bug Summit', coming to Denver this December. We also catch up with Orkin Pest Control to review tips on how to detect a bed bug. As always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

center and they told they were bug bites. They asked me if I had checked my bed for bed bugs. I didn't know they existed," said a New Mexico State University student who battled a bed bug infestation an apartment complex off campus. NMSU's Alvaro Romero, entomology professor, is profiled in a story posted on PCT Online. To read the rest of the article, click here.

**Bed Bug Basics and History**

Bed bugs probably received their common name from their habit of feeding on humans while they sleep in their beds. Bed bugs have also been called "red coates," "mahogany flats," and "wall-lice." Bed bugs have been a household pest issue for more than 3,300 years, dating back to ancient Egypt. They were first brought to the United States by early colonists, where they thrived for many decades. However, by the 1950's, bed bugs had been all but eradicated in the developed world, thanks to the availability of new pest control products, coupled with the widespread use of vacuums and washing machines which helped to control the

BBC's Liz Bonnin investigates an increasingly common and unwelcome guest -- the bedbug. She visits Dr. James Logan (London School of Hygiene and Tropical Medicine) in his laboratory where he volunteers to let one of the little critters feast on his blood. Investigating the science behind the headlines and making sense of the everyday issues that matter to us all.

**Feature Article: Bed Bugs - Statistics Don't Lie ... Yes, They Are Everywhere**

Bed bugs have experienced a resurgence during the last decade that essentially is unrivaled by the growth of any pest in the pest control industry. But while many people have never come into contact with the pest - as far as they know - bed bugs literally are everywhere.

Think of the different facets of a community that can be affected by bed bugs and there likely are numerous examples of infestations that can be cited. In the hotel sector, these businesses are not only tracked on numerous travel websites but The Bed Bug Registry was formed specifically for the purpose of reporting bed bug incidents.

Colleges and universities have incidents splashed across the "front pages" of social media networks on a weekly basis, causing fear among students and concern at the parental level. Regardless, bed bugs have intruded into almost every corner of the country's higher learning institutions - as evidenced by the 996,000 results that come up in a Google search for college bed bug incidents.

Senior living centers, public housing, halfway houses and even prisons are being inundated with bed bug incidents - proving that bed bugs are everywhere. According to the 'Bugs Without Borders' survey, conducted by the National Pest Management Association and the University of Kentucky, not only are they everywhere but most people are either coming into contact with them or know someone who has had a bed bug-related experience. To read the full article, visit the Allergy Technologies' blog.

**On The Road with Allergy Technologies in September**

During the month of September, Allergy Technologies' will be "On the Road" at:

- IPCA Fall Conference, Abraham Lincoln Hotel and Conference Center, Springfield, IL, Sept. 10-11, 2013
spread of infestations in living spaces. To read more, visit NPMA’s bed bug section online.

PCT Online: JP Pest Services Helps Homeless Man Dealing with Bed Bug Infestation

JP Pest Services of Milford, N.H. recently provided relief for a local homeless man dealing with a major bed bug infestation. After being contacted by the man's pastor JP Pest Services decided to perform the treatment at no cost; since the infestation quickly became unmanageable and too costly for the man to handle on his own.

In addition, our sales representatives will be making personal presentations to pest management firms throughout the country on how ActiveGuard will create and secure more revenue for each and every bed bug job performed. Further, hear about some tips and guides on establishing bed bug preventative programs...a new source of renewable income! If you are interested in learning more, please contact us at info@allergytechnologies.com to arrange a time to schedule a personalized presentation about ActiveGuard Mattress Liners and YOU!

Do you have an ActiveGuard story to tell?

Looking to be featured in PMP Magazine? Allergy Technologies is looking for a few more PMPs who are using ActiveGuard as part of their bed bug control and preventative strategies to profile as success stories. We'll feature PMPs in various editions of 'The Bed Bug Authority.' Let us know how ActiveGuard is helping your business make more money while killing more bed bugs. Email us here to tell your story.

Purchase ActiveGuard Online Today!

Orkin: How to Detect a Bed Bug

Orkin Pest Control provides some great information about bed bugs, including how to detect and prevent bed bugs. Detecting bed bugs can be difficult, as they are small in size and able to hide in tiny cracks and crevices. However, evidence of a bed bug infestation may be found in bedding and on mattresses. Live bed bugs leave clusters of dark brown or black spots of dried excrement on infested surfaces. Bed bugs also exude a subtle, sweet, musty odor.

Bed bugs have flattened wingless, brown or reddish-brown bodies. They can be found in bed sheets, box springs, walls, clothing and luggage. They prefer tight crevices and dark locations where they can remain hidden and protected. Mattresses and other furniture may also host these parasitic insects. Bed bugs are easily transported into previously non-infested dwellings.

NPMA to Present Global Bed Bug Summit in December
ActiveGuard® Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women’s shelters and asthma clinics.

ActiveGuard Mattress Liners kill bed bugs generally within 72 hours, even for many of those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating the mattress and box spring sleeping area. These liners’ two year ability to keep on killing bed bugs provides for continual prevention and control against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

**Less Than Two Weeks to Enter a Nomination for Young Entrepreneur Award**

Less than two weeks remain to enter a nomination for the National Pest Management Association (NPMA)'s Young Entrepreneur Award. This is the second year the NPMA will recognize young entrepreneurs 40 years or younger working in the professional pest management industry. Applicants will have demonstrated an ability to create or develop an industry innovation or brought a meaningful industry concept to fruition. Nominations may be submitted [online here]. Self-nominations will be accepted. All nominations must be received by 5 p.m. ET on Aug. 15, 2013.

**Feature Article: How to Keep Bed Bugs from Coming Home With Your College Student**

As bed bugs spread, more college campuses are battling the bloodthirsty pests. College dorms can be incubators for bed bugs. They hitchhike into the dorm as new residents move in each semester or on visiting friends. College dorms tend to be cluttered, giving these tiny insects lots of places to hide. And with all those students to feed on, the bed bugs will never lack a meal in the dorm.

When your child comes home for holidays or summer break, he may bring along some unwelcome guests if you’re not careful. Whether or not you know your child’s dorm is infested with bed bugs, it’s smart to take some precautions each time he comes home.

Where the bed bugs are: Report shows rise in 15 cities

USA TODAY
A GANNETT COMPANY

Start scratching. Terminix has just issued its annual list of top bed-bug infested cities. In a twist this year, the exterminator has identified the 15 top cities with the largest increase in infestations.

We'll get to that, but first, a look at where the most bed bug-specific calls from anguished (we presume) customers are coming from. Terminix has 300-plus branches nationwide.

To look at the list of top cities, visit USA Today online.

Testimonial: John Bonsted
"When bed bugs bite"

It was one of the most infested apartments Pest Management Professional (PMP) John Bonsted had ever seen. There were hundreds of bed bugs crawling across the walls and bed. The man who lived there reportedly suffered from certain mental challenges and never alerted the building manager of the problem.

"He had so many bites on him," says Bonsted, owner-operator of Value Guard Exterminating, based in Gloucester County, New Jersey. "It was awful."

Bonsted's standard IPM protocol for bed bug jobs includes protecting mattresses and box springs with Allergy Technologies' ActiveGuard Mattress Liners while also treating bedding (including mattress and box spring) with both physical means (vacuuming and steam) and labeled-for-use chemicals. The company includes two follow-up inspection/services as part of the treatment program. To read the full testimonial article from PMP Magazine, click here.
ActiveGuard™ Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. Bed bugs have reached the primetime! On Discovery Channel's Property Wars, this enticing property may seem like a great deal, but there is a chance it could be infested with bed bugs. Watch the clip to learn more and watch Property Wars Thursdays at 10 EDT | 9 CDT on Discovery.

**The Ohio State University Researcher Dr. Susan Jones Publishes "Behavioral Responses of the Bed Bug to Permethrin-Impregnated ActiveGuard™ Fabric in the Journal Insects**

Dr. Susan Jones’ paper titled "Behavioral Responses of the Bed Bug to Permethrin-Impregnated ActiveGuard™ Fabric" was published in the peer review journal *Insects* on June 7th, 2013. From the abstract, here is a portion of the article:

ActiveGuard™ Mattress Liners have been used to control house dust mites, and they also are commercially available as an integrated pest management tool for use against bed bugs (*Cimex lectularius*). The aim of our study was to evaluate responses of numerous populations of the bed bug to the permethrin-impregnated fabric, with particular regard to contact toxicity, repellency, and feeding inhibition.

Continuous exposure to ActiveGuard fabric resulted in rapid intoxication for three of four populations, with 87 to 100% of moderately pyrethroid-resistant and susceptible bed bugs succumbing by 1 d. In comparison, a highly resistant population reached 22% mortality at 10 d. Video data revealed that bed bugs readily traversed ActiveGuard fabric and spent a considerable amount of time moving about and resting on it during a 12-h period. ActiveGuard fabric was non-repellent to bed bugs from five tested populations.

Furthermore, significantly fewer bed bugs successfully fed to repletion through ActiveGuard fabric than through blank fabric for the five populations. With just 30 min of feeding exposure, mortality ranged from 4% to 83%, depending upon the bed bug strain. These laboratory studies indicate that ActiveGuard liners adversely affected bed bugs from diverse populations.

The Great Bed Bug Plague of 2012

Hotels Week spotlights some of the most luxurious, sleek, and eye-catching aspects of Philly's hotel scene, but there's also a place for the seedy underbelly of hotel mattresses. It's time to talk about the great bed bug plague of 2012.

Truth or hype? The uproar took off when Terminix, an extermination company, named Philadelphia the nation's bed-buggiest city, upsetting New York, which had held the title for the previous two years. Though the Greater Philadelphia Association of Hotels protested the designation as unfair and inaccurate, the Philadelphia hotel industry has labored under the burden of the designation for a full year, and no new list has been released. The list is compiled by tracking Terminix service calls in each city, so while it's an unflattering indicator, it's far from statistically unimpeachable.

To read the full article, visit the Philly Curbed website.

Bed Bugs Infest Homeland Security Office in Vermont

A Homeland Security Department building in Vermont has been infested with bed bugs for the third time in as many months, according to a local news report.

Exterminators brought a bedbug-sniffing dog to the U.S. Citizenship and Immigration Services office in St. Albans and some chairs and filing cabinets were removed, employees told WCAX. About 1,000 employees work at the facility.
“[The Vermont Service Center's] leadership has and will continue to update employees regarding developments,” the office’s acting Director Karen FitzGerald said in a statement. “Treatments for identified areas will begin this weekend. USCIS recognizes the seriousness of this issue and is committed to working closely with our employees, our partners and professional experts to resolve this situation.”

Visit PestWorld.org for more information and please share this with others. Public awareness is key in controlling bed bug infestations.

WJAC TV: Bed Bugs Found in Penn State Dorms

Bed bugs weren't invited to a science camp at Penn State -- but they showed up anyway. The pests invaded a dorm in the East Hall complex on the University Park campus.

Parents reached out to 6 News telling us their kids were staying in dorm rooms infested with bed bugs. We did some digging and found sheets tossed on the side of the road and exterminators busy at work. Hundreds of kids flock to Penn State's main campus every summer for science camp, but this year some of those children got an extra lesson on entomology after they found bed bugs crawling around their sheets.

Those students and parents didn't want to talk on camera but they tell us the rooms were filthy and some high school students have several bed bug bites. A statement from Penn State confirms three rooms in Curtin Hall are infested with the tiny insect that is the size of an apple seed.

To read the full article, visit the WJAC TV website.

Survey: Bed Bugs a Growing Problem in Autos
PMP Magazine? Allergy Technologies is looking for a few more PMPs who are using ActiveGuard as part of their bed bug control and preventative strategies to profile as success stories. We'll feature PMPs in various editions of 'The Bed Bug Authority.' Let us know how ActiveGuard is helping your business make more money while killing more bed bugs. Email us here to tell your story.

We all know that picking up hitchhikers is not generally a good idea, and there is one little stowaway that can really make life miserable for motorists. Her name is Cimex lectularius.

That's Latin for "bug of the bed." And while the tiny red insects aren't a hazard that springs to mind when we think of automotive bugaboos, you can bet that the plush upholstery in your vehicle, as well as the frequent appearance of seated humans ripe for the bloodsucking, can be attractive to bedbugs.

That's especially so in travel season, when you might be hefting luggage from car to motel room and back again, or otherwise boosting the odds that these wily little critters -- who love the crevices and dark places a car cabin offers -- might hop aboard. Even if no road trips are on the schedule, you can bring bedbugs to your car after sitting for a while in upholstered chairs at libraries, restaurants, movie theaters and even airplanes, according to insect experts.

SPC Releases 2012 Pest Control Market Research Report

The latest research report from Gary Curl reveals the U.S. structural pest control industry generated an estimated $6.815 billion in total service revenue in 2012, a 4.5 increase from the $6.524 billion measured in 2011.

The U.S. structural pest control industry generated an estimated $6.815 billion in total service revenue in 2012, a 4.5 increase from the $6.524 billion measured in 2011. The top three U.S. service providers, Orkin, Terminix, and Ecolab, represented 40.4% of the total industry revenue for the termite and general pest market segments this past year.

Service revenue derived from controlling bed bugs declined two percent from the prior year, bringing the total revenue earned to $401 million. Single family homes and apartments were the primary leading types of accounts pest control operators treated for bed bugs. Nearly one-third of those servicing accounts for bed bugs report employing a monitoring device as part of their service.

May 2013

The Infestation Grows

For the last several years bed bugs have become an overwhelming public pest - they have been found throughout mainstream areas of life such as hotels, homes, and schools. But as public awareness has grown, this pest has continued to infest other locations like carnivals, firehouses, nursing homes, cruise ships, libraries, hospitals, etc. ... all considered new and unique destinations! The bed bug problem expands each day and despite increased education, numbers of incidents continue to mount. This month we examine how widespread and diverse the problem really is; some locations may even surprise you! And as always, please remember to share 'The Bed Bug Authority' with any professionals in your company or networking circles interested in 'all things bed bugs.'

USDA Researcher Looks To Control Bed Bugs

A U.S. Department of Agriculture researcher is studying ways to control bed bugs. The USDA's Bob Ellison has more.

Forbes Magazine: Bed Bugs In Taxis?! New Bed Bug Report (Summer Camps and Hospitals, Too)

The Spring 2013 bed bug season is here and it's shaping up to be another bad year, according to the National Pest Management Association and the University of Kentucky, which just released their annual survey Bugs Without Borders. And the hard-to-get rid of pests are turning up in all sorts of unexpected places.

You may think you already know about bed bugs. When you travel, you check your hotel bed carefully, and you always put your suitcase up on a luggage rack. Unfortunately, this year's report shows, bed bug infestations have extended far beyond your sleeping arrangements. To read the full article, visit Forbes.com.

Infection Control Today: Research Could Lead to Better Bed Bug Control

Regina Baucom, PhD an assistant professor of biological sciences at the University of Cincinnati, has researched the DNA of local bed bug populations, and she's found something that could lead to a better way to control the notoriously tough insects.

Dr. Baucom's research paper, "A 454 Survey Reveals the Community Composition and Core Microbiome of the Common Bed Bug (Cimex lectularius) Across an Urban Landscape," was published in PLOS ONE, a peer-reviewed, open-access journal of the nonprofit Public Library of Science. Additional contributors to Baucom's research were Sara Matthews, a technician in the Baucom lab, and Rita Rio, PhD an assistant professor of biology at West Virginia University. First author of the study is Matt Meriweather, a senior biological sciences major in UC's McMicken...

**MSN.com: Having conquered the rest of the country, bedbugs move on to hospitals**

More than a third of exterminators treated bedbug problems in hospitals in 2012, according to the National Pest Management Association. That's 6 percent higher than the year before and more than double the number from 2010. This is not a good thing. See, while bedbugs haven't been known to transmit infections to humans, their itchy bites can cause patients to scratch themselves and cause open sores, which isn't great in an environment with tons of communicable diseases such as MRSA.

Cornell University: Bed bugs are back! An IPM Answer

Bed bugs mostly troubled rich people in medieval times, because they had the warmest homes. But as the quality of homes improved during the late sixteenth century, bed bugs became a problem for people of all economic classes. Before World War II, they were a common pest in the U.S. until a combination of factors including DDT, a household appliance, and fashion nearly eliminated them.

EPA: Identifying and Controlling Bed Bugs

The common bed bug (Cimex lectularius) has long been a pest - feeding on blood, causing itchy bites and generally irritating their human hosts. The Environmental Protection Agency (EPA), the Centers for Disease Control and Prevention (CDC), and the United States Department of Agriculture (USDA) all consider bed bugs a public health pest. However, unlike most public health pests, bed bugs are not known to transmit or

March 2013

Litigation

This month we take a look at one of the most serious aspects of bed bug infestations - the impact of litigation. While the cost to eliminate an infestation and the irreparable damage to brand reputation of a school, hotel or housing complex are well-documented, litigation seeking financial remedy is often the next phase. Awarded monetary damages can cripple an institution! Enjoy this month's issue as we probe into this serious side of pest control with regard to bed bugs and the mess they leave behind in the court system.

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

February 2013

Bed bugs continue to be a major problem throughout this country, from residences to hotels; in public places such as libraries, retail stores and warehouses; and, in office buildings. But one area where everyone is seeing an upsurge in bed bug activity is in schools, from elementary to university settings and everything in between! In this month's issue of 'The Bed Bug Authority' we take a look at some of these recent incidents as well as an in-depth profile on how to battle against the pest. In addition, we have Orkin's yearly ranking of the top bed bug cities in the country ... guess who is number one!? Read below to find out!

Hot off the Press!! A Recap of This Month's Top Bed Bug News from Around the Country

PCT Online: "Chicago Named Top City for Bed Bugs" - Orkin has just released its rankings of U.S. cities in order of the number of bed bug treatments from January to December 2012. The "Windy City" of Chicago tops the list, followed by Detroit, Los Angeles, Denver and ... more.

The Daily at UW: "UW libraries say bedbugs are gone from library books" - Library books previously infested with bedbugs are now declared free of the insects, according to UW Libraries. The bugs were discovered in approximately 10 books last August ... more.

CapitalNewYork.com: "Where's Roscoe? Bed Bugs infest 'Wall Street Journal' headquarters" - Wall Street Journal employees began their day this morning with a bit of a headscratcher. (More of a head-to-toe scratcher, really.) "I wanted to let you know that on Friday ... more.

**PestWorld 2012 News & Highlights!**

Pest Management Professionals gathered in mid-October for four days to attend NPMA's PestWorld 2012 trade show in Boston. Here are some of the highlights:

**Cirkil Launched:** Terramera, a developer plant-based bioscience products for pest management, announced the launch CIRKIL CX Insecticide and Ovicide Concentrate and CIRKIL RTU Ready-to-Use Insecticide and Ovicide ... [more](http://archive.constantcontact.com/fs127/1103923425466/archive/1111432499185.html).

**Residex Sales Training:** Distributor Residex was highlighting a promotion in which it was raffling off a free session with Patrick Quigley, a premier sales trainer. The session, according to the promotion, was valued at $1,800 ... [more](http://archive.constantcontact.com/fs127/1103923425466/archive/1111432499185.html).

**Allergy Technologies Party:** Manufacturer Allergy Technologies held an industry social gathering for about 150 PMPs on Thursday, October 18th. The event brought together PMPs from around the country in an informal setting in which they could discuss industry issues ... [more](http://archive.constantcontact.com/fs127/1103923425466/archive/1111432499185.html).

**PCT Leadership Awards:** PCT and Syngenta recognized the Crown Leadership Award winners at NPMA PestWorld during a special ceremony on Thursday. The awards spotlight individuals who have contributed positively to the growth ... [more](http://archive.constantcontact.com/fs127/1103923425466/archive/1111432499185.html).

**NPMA Strategic Plan:** More than 3,000 attendees representing 65 countries traveled to Boston, last week, for PestWorld 2012, NPMA's annual conference and tradeshow. As part of Wednesday's opening ceremony, NPMA President Laura Simpson provided ... [more](http://archive.constantcontact.com/fs127/1103923425466/archive/1111432499185.html).

**ActiveGuard "On the Road" in November!**

Here's where you'll find Allergy Technologies "On the Road" this month. If you are attending one of these events, please stop by to visit with us or contact Helene Fantini at [helene@allergytechnologies.com](mailto:helene@allergytechnologies.com) to arrange a time to discuss how ActiveGuard Mattress Liners can help you.
ActiveGuard Mattress Liners kill bed bugs within 72 hours, even for those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your standalone long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating bedding. These liners' ability to keep on killing bed bugs provides for continual protection against any adult bed bugs, nymphs or eggs missed during initial treatment or any bed bugs re-introduced after treatment has been concluded.

ActiveGuard™ Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics. **7 Major Reasons Why Commercial Sales Reps are Failing ... By Patrick Quigley**

The Commercial Sales Position is arguably the most difficult position to fill
in a Pest Management Business. (If you are struggling with this - you're not alone). It can also be the most expensive if not orchestrated correctly. Companies routinely spend - and waste - upwards of $50,000 or more on this position - and that amount doesn't take into consideration the owner's time, production loss, and field training days.

To read more of Pat Quigley's article, click here.

Looking to purchase ActiveGuard Mattress Liners? It's easy to buy ActiveGuard online, just click here!

**Look for a new ActiveGuard ad Campaign in the Hotel Sector!**

Bed bug infestations in colleges and universities are dramatically rising throughout the country. With students changing housing locations on a regular basis, this transient environment increases the likelihood of bed bug migration to other rooms and beyond...back to their families during breaks throughout the year. As a result, schools are prime candidates for bed bugs challenges and those being affected will suffer not only in reputation, but increased risk to litigation and perhaps in declining housing revenues.

Despite parents and college administrators having enough on their plates...
Under the direction of its exclusive hospitality distributor, Hospi-Tel, a new and provocative advertising campaign in the hotel industry will be launched shortly! Look for these new ads soon!

Q&A: Who Can Use ActiveGuard?
The entire family can enjoy the benefits of ActiveGuard! As of changes affected by the EPA on December 28, 2011, everyone from infant to toddler to adult can be protected by ActiveGuard and sleep with confidence.

Q&A: Don't Encasements Kill Dust Mites?
Encasements work by fully enclosing your mattress with plastic or tight woven material. House dust mites and their allergens are therefore confined within the encasement, where they continue to live and breed while you are sleeping. To work effectively, encasements must be washed regularly (at least once every month or so) to remove any dust mites and allergens that have started to reform on the encasement’s surface.

Follow & Like ActiveGuard on Facebook, Linked In & Twitter!

Allergy Technologies already, pro-active pest control at the college level now has ascended from a concern to a necessity! There is only one product that provides the confidence and security in removing bed bugs from university bedding -- ActiveGuard Mattress Liners!

ActiveGuard Mattress Liners not only kill bed bugs dead within 72 hours and continuously for two years, but they are so easy to install a student can do it in less than one minute! To learn more about how ActiveGuard can help protect your student, dormitory and family, visit Allergy Technologies.

'Take the ActiveGuard Challenge' for a Chance to Win an iPad!

Allergy Technologies knows that time is money for Pest Management Professionals. During the months of July and August, we are challenging PMP's to switch just one bed bug account over to ActiveGuard Mattress Liners and see the positive impact we can have on your bottom line.

Hello,

The vacation planning season is underway and there's one solution to protect your family and friends from bed bugs - ActiveGuard™ Mattress Liners! These thin, breathable liners come in four sizes that accommodate almost every size bed, take less than a minute to install and can be used multiple times to protect you from bed bugs while staying in hotels, cruise ships, bed and breakfasts or any other vacation destination.

ActiveGuard Mattress Liners kill bed bugs within 72 hours, even for those resistant strains studied! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your standalone long term solution to keep bedding from being infested! As part of a comprehensive strategy for treating an active bed bug infestation, ActiveGuard is an excellent choice for use as the final step in treating bedding. These liners' ability to keep on killing bed bugs provides for continual protection against any adult bed bugs, nymphs or eggs missed during initial treatment and any bed bugs re-introduced after treatment has been concluded.

Please add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Protect Your Family Trip from Bed Bugs: Remember to Bring ActiveGuard Mattress Liners!

With the school year ending soon and vacations being planned, the time to protect your family from bed bugs this travel season is now! Remember to purchase ActiveGuard Mattress Liners through online retail distributors, from any Pest Management Professional and directly from Allergy Technologies.
Use ActiveGuard Mattress Liners from Allergy Technologies in hotels and other vacation destinations this summer to protect from bed bugs!

The breathable, thin ActiveGuard liners can be installed onto a mattress by one person in less than a minute, and the liners are comfortable and provide security that no other mattress covering product can deliver. Unlike encasements that must be discarded once damaged and are prone to ripping and tearing, ActiveGuard continues to provide continual protection even in the unlikely event of a tear. ActiveGuard Mattress Liners are the only field-proven bedding product to kill bed bugs dead within 72 hours and continue to provide 24/7 protection for up to two years.

Learn more by reading the "About ActiveGuard" section at the Allergy Technologies' Web site.

*** Important Reminder ***

EPA Issues New Label for ActiveGuard Mattress Liners: Product Now Can Be Used by Persons of all Ages - State-wide Approval

The Environmental Protection Agency (EPA) issued a new label for ActiveGuard™ Mattress Liners, removing restrictions from its use. ActiveGuard can now be used by persons of all ages.

ActiveGuard's new labeling bearing NO age use restrictions was approved by the EPA in late December 2011 and has now been approved throughout the United States at the state level.

These changes make the use of ActiveGuard available to persons of all ages, including small children; to read the full press release, visit the Allergy Technologies' blog.

ActiveGuard™ Mattress Liners are covered under U.S. Patents 5,916,580, 6,214,365, 6,440,438 and pending patents. Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

The Los Angeles Times features ActiveGuard!
Allergy Technologies "On the Road"

Q&A: Are bed bugs for real?
Yes. Adult bed bugs are about the size of an apple seed, with the first juvenile forms hatching from eggs about the same size as a poppy seed. Bed bugs feed on the blood of warm blooded animals (mostly humans) and tend to feed at night when you are sleeping and then return to their hideaways, which are usually near the bed. Mattresses and boxsprings are among the bed bug's favorite places but the difficulty in treatment of bed bug infestations is that they also can hide behind headboards, in walls, behind pictures and even in computers and clock radios. That is why it is important to work with a bed bug professional. Visit our FAQ online for more information.

### Q&A: Who should

**Allergy Technologies Signs Exclusive Agreement with Hospi-Tel to Distribute ActiveGuard™ Mattress Liners to the Hospitality Market**

Allergy Technologies LLC has signed an exclusive distribution contract with Hospi-Tel, allowing it to represent and sell ActiveGuard™ Mattress Liners throughout the hospitality industry nationwide.

Hospi-Tel, a leading manufacturer and distributor of hospitality and healthcare products will exclusively represent ActiveGuard Mattress Liners to all hotels, motels and other lodging facilities throughout the country.
use ActiveGuard Mattress Liners?

Anyone who has a known bed bug infestation or is concerned about preventing bed bug bites should consider using ActiveGuard Mattress Liners. Bed bug bites are painful, itchy, and can even cause allergic reactions. Bed bugs are becoming increasingly prevalent, and can easily spread between homes, apartments and hotel rooms. Bed Bugs feed on blood and, most commonly, bite people in their beds while they are sleeping.

Q&A: What is ActiveGuard?

ActiveGuard mattress liners are developed to kill bed bugs and dust mites in mattresses. Active mattress liners were derived from bed nets, used over the past 50 years to protect against mosquitoes and malaria. Originally designed as a simple and proactive alternative to encasements for control of house dust mites (long associated with asthma in children and adults), active liners have been shown to be effective against bed bugs in lab and field studies.

ActiveGuard is now on Facebook, Linked In & Twitter!

Hello,

With business travel in full swing and holiday vacations around the corner, there's no better time to be reminded of the need for protection from bed bugs in hotels.

ActiveGuard mattress liners kill bed bugs within 72 hours! If you are seeking a pro-active preventative approach, ActiveGuard should be considered as your standalone long term solution to keep bedding from being infested! Please add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Hotel Industry Continues To Fight Bed Bug Problem; ActiveGuard Provides a Solution

As the country's bed bug infestation continues to affect many housing, vacation and rental markets, no other industry has been affected as greatly by the bed bug infestation as the hotel and lodging market. For example, quotations suggest that the $30 Billion lodging industry in NYC is being compromised by this insidious pest. On a daily basis, the media is replete with an ever-expanding list of hotels and motels facing bed bug problems.

The solution for hotel and motel bedding programs is ActiveGuard mattress liners. The liners are an important tool in every Pest Management Professional's "toolbox" of treatments and ideal in creating a hotel protocol for bed bugs. ActiveGuard are thin and breathable liners easily installed onto mattresses and box springs, which kill bed bugs and dust mites continuously for up to two years. Learn more by visiting ActiveGuard online.

Hello,

This month our e-newsletter explores pest management as it relates to transient housing. A must-read article is the strong new case study that explores the benefits of ActiveGuard™ mattress liners. From PCT Magazine’s August issue, it discusses the product's use as part of an effective bed bug control strategy.

ActiveGuard mattress liners kill bed bugs in most cases within 24 hours and should be your standalone long term solution to keep bedding from being infested! Make sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

PCT Magazine Article: Controlling Bed Bugs in Transient Housing Facilities

An impressive case study about pest management in transient housing facilities is in the August 2011 issue of PCT Magazine. The article is based on a philanthropic effort to establish a comprehensive bed bug control program at the Queens Galley soup kitchen and Washington Manor housing facility in Kingston, N.Y.

ActiveGuard mattress liners were used as part of the program and the article evidences the product's advantage over encasements by "removing isolated bed bugs from the surface of the mattress by killing them directly." The case study then suggests that ActiveGuard minimizes the potential for re-establishment of an infestation.

Click here to read the complete article on PCT's website.

Hello,

We have big news this month as Allergy Technologies LLC announces its major research grant to The Ohio State University. This grant is for the development and study of products, strategies and protocols leading to improved treatment of bed bugs! Also, we hit the road again in August so try to meet with us if you'll be attending our upcoming trade shows.

ActiveGuard™ mattress liners kill bed bugs in most cases within 24 hours and should be your standalone long term solution to keep bedding from being infested! Make sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Allergy Technologies Provides Over $100,000 in a Research Grant to The Ohio State University for the Study of Bed Bugs

Allergy Technologies LLC, manufacturer of ActiveGuard™ mattress liners, is sponsoring a new bed bug research program at The Ohio State University through an initial $100,000+ grant provided by the Company.

This new endeavor will examine the importance and effects of specific products, protocols and strategies relating to innovative bed bug treatment applications. The dramatic rise in bed bug infestations throughout the country in the last ten years has created a need for more research to improve and expand pest management practices.

Based on mutual agreement between The Ohio State University and

using ActiveGuard.

Universities Battle Bed Bugs

Hello,
As college and university students take their summer break, this is the perfect time to highlight the need for taking a pro-active approach to maintaining a dorm and campus housing environment free of bed bugs.

ActiveGuard™ mattress liners kill bed bugs in most cases within 24 hours and should be your standalone long term solution to keep bedding from being infested! Make sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Universities Battle Bed Bugs in Fight to Maintain Student Housing Revenues

Frequent news reports have indicated that the frequency of bed bug infestations in colleges and universities are dramatically rising throughout the country. With students changing housing locations on a regular basis, the transient environment created increases the likelihood of migration to other rooms and back to their families during breaks throughout the year. As a result, schools are prime candidates for bed bugs challenges and those being affected will suffer not only in reputation but perhaps in declining housing revenues.

So while parents and college administrators have enough on their plates already, new pest control at the college level becomes not only a concern but a necessity. And only one product provides the confidence and security in removing bed bugs as a concern from university bedding -- ActiveGuard mattress liners.

ActiveGuard mattress liners not only kill bed bugs dead within 72 hours but they are so easy to install a student can do it in less than one minute! To learn more about how ActiveGuard can help protect your student or...
Allergy Technologies "On the Road" ... in July!

Here's where you'll find Allergy Technologies "On the Road" in July. If you are attending one of these events or in the city we are visiting, please visit our booth or email Helene Fantini at helene@allergytechnologies.com to arrange a time to discuss how ActiveGuard mattress liners can help you.

Orlando, Fla.

Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

For more information, visit www.allergytechnologies.com or call (866) 978-6288.
Hello,

We focus this month on multi-occupancy dwellings or MODs. Throughout the country, there is an ever-increasing legal shift in responsibility for establishing and maintaining a bed bug free environment toward property ownership and their assigned managers. Coupled with the high turnover ratio of residents in these types of housing, bed bugs are an explosive issue confronting large apartment complexes, dormitories, long-term health care facilities and other MODs. ActiveGuard™ mattress liners that kill bed bugs in most cases within 24 hours should be considered as your standalone long term solution for these locales!

Please be sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Use ActiveGuard Mattress Liners to Protect Your MOD Investment and Reputation

As the current bed bug infestation continues to grow, multi-occupancy dwellings or MODs are at high risk because of the transient nature of the residents. The residents of dormitories, long-term health care facilities, apartments and other MODs are changing locations on a very frequent basis compared to homeowners.

ActiveGuard mattress liners is focused on supporting MOD property owners and general managers through participation in trade shows like the National Apartment Association's annual event later this month (see below).

Having bed bugs at your MOD increases your financial risk as an owner or operator and it certainly tarnishes your reputation with social media postings quickly posted on Google and in blogs. Be pro-active, talk to Allergy Technologies today about ActiveGuard mattress liners. To learn more about MODs, visit NAA's blogs.

Use ActiveGuard to Protect MODs

Allergy Technologies on the Road ... in June!

Terminix recently ranked the Top 15 cities hit by bed bugs, with New York in the top spot. Here's the entire list by city:

1. New York
2. Cincinnati
3. Detroit
4. Chicago
5. Philadelphia
6. Denver
7. Washington, D.C.
8. Los Angeles
9. Boston
10. San Francisco
11. Columbus, Ohio
12. Dayton, Ohio
13. Baltimore
14. Louisville, Kentucky
15. Dallas

Q&A: Does ActiveGuard Kill Bed Bugs?

ActiveGuard mattress liners kill bed bugs in both mattresses and boxsprings within 72 hours and most within 24 hours! Read more in the ActiveGuard Issue: #5

Multi-Occupant Dwelling

Hello,

We focus this month on multi-occupancy dwellings or MODs. Throughout the country, there is an ever-increasing legal shift in responsibility for establishing and maintaining a bed bug free environment toward property ownership and their assigned managers. In this issue, we are pleased to unveil not one but two major news announcements. Allergy Technologies has an exciting new partnership in the bedding industry and we are making the debut of the first ActiveGuard™ mattress liners video on our new YouTube channel, with the video appropriately titled "ActiveGuard in Action!"

Please be sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Southerland and Allergy Technologies Partner to Develop the Total Protection Sleep System

Southerland, Inc. and Allergy Technologies LLC, maker of ActiveGuard Mattress Liners, have partnered to develop and introduce the Southerland Total Protection Sleep System, the first mattress and foundation system to effectively eliminate bed bugs, dust mites and their allergens.

Available this summer, Southerland's Total Protection Sleep System uses the proprietary ActiveGuard technology to actively kill bed bugs and dust mites upon contact, so protection and peace-of-mind are built directly into the mattress and foundation.

To learn more about Southerland's Total Protection Sleep System, read about it as featured in PCT Magazine and Furniture Today, or in the Allergy Technologies' blog.

"ActiveGuard in Action" Makes its Video Debut on the Allergy Technologies YouTube Channel!

Proof that ActiveGuard mattress liners are tough on bed bugs is now only a click away with the YouTube channel launch of our new video "ActiveGuard in Action." Watch the video and you'll see how quickly it...
liners, which kill bed bugs dead within 72 hours, are available for sale online.

Allergy Technologies March 2011 e-Newsletter

**In This Issue**
- **Follow us on Social Media!**
- **ActiveGuard Going on Tour!**
- **AHLA President Mentions ActiveGuard**
- **Join Our List**

**Issue: #2**

**Hello,**

Allergy Technologies would like to thank you for the positive responses we received to our first e-newsletter, and again extend our commitment to delivering quality news to you on a monthly basis.

Please be sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

**Allergy Technologies Going on Tour with National Sponsorship of NPMA's Bed Bug Workshops**

In addition to exhibiting at the upcoming NPMA PestWorld 2011 trade show in New Orleans, Allergy Technologies will be providing support to associations at the state and local levels. For instance, we will be working with Florida’s association to support its trade publication.

Look for ActiveGuard Mattress Liner ads in issues of PCT Magazine and PMP Magazine, as well. In addition, you can find ActiveGuard ads in Cruise Industry News, ASU (American School & University), Hotel Management, Focus - the publication of the New York State Hospitality and Tourism Association (NYSHTA) - and more.

We are going on our 2011 tour ... with the National Pest Management Association! Allergy Technologies will be a national sponsor of and participant in the National Pest Management Association's (NPMA) bed bug workshop tour slated for 15 cities between mid April and late May.

The workshops, delivered in partnership with the American Hotel and Lodging Association (AHLA), the National Apartment Association (NAA) and the Association of College and University Housing Officials, is designed, according to NPMA, to deliver a series of workshops across the country to educate property and housing managers on how they can effectively respond to the threat of bed bugs.

Read more about the workshop tour and our sponsorship on PCT Online.

**ActiveGuard Mattress Liners Mentioned as Product Choice by AHLA President at EPA Bed Bug Summit**

Joe McInerney, President and CEO of the American Hotel & Lodging Association (AHLA) included ActiveGuard as a resource for Pest Management Professionals (PMPs) in his recent discussion at the EPA’s Bed Bug Summit. ActiveGuard is the first EPA-registered mattress liner that kills bed bugs dead within 72 hours.
ActiveGuard is now on Facebook, Linked In & Twitter!

Visit the [EPA's Web site](http://archive.constantcontact.com/fs021/1103923425466/archive/1104724813401.html) to view McInerney's full presentation.

### Visit With Us About ActiveGuard Mattress Liners at BuildingsNY or Another Upcoming Trade Show

The Allergy Technologies team will be on the move quite a bit in March, and we're more than happy to meet with you at any of our upcoming trade shows, conferences or seminars to discuss the value and protection that ActiveGuard delivers. Here's our March seminar/show schedule:

- Annual Philadelphia Hospitality Show: March 14, Union League, Philadelphia, PA
- New Jersey Pest Management Assoc.: March 29, Piscataway, NJ
- BuildingsNY: March 30-31, Javits Convention Center, NY

Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.

For more information, visit [www.allergytechnologies.com](http://www.allergytechnologies.com) or call (866) 978-6288.
Hello,

PMP Magazine subscribers and friends of Allergy Technologies LLC, we are proud to welcome you to our new e-Newsletter. We have met many of you at conferences and presentations throughout the country.

Perhaps, by now, you have used our product, ActiveGuard™ mattress liners, as part of your arsenal when treating for bed bug infestations, both active and as a preventative strategy. For those of you we have yet to meet, we welcome you to Allergy Technologies, home of ActiveGuard mattress liners for use against bed bugs and dust mites.

Please be sure to add helene@allergytechnologies.com to your contacts to ensure the receipt of this e-newsletter on a regular basis.

Each month we'll bring you news and information about ActiveGuard Mattress Liners, which kill bed bugs dead in 72 hours. The thin, comfortable liners are odorless and a vital tool as part of any bed bug control strategy.

Problem: Hotel Industry Devastated by Bed Bugs
Solution: ActiveGuard Kills Bed Bugs in 72 hours

No other industry has been affected as greatly by the bed bug infestation as the hotel and lodging market. For example, quotations suggest that the $30 Billion lodging industry in NYC is being compromised by this insidious pest. On a daily basis, the media is replete with an ever-expanding list of hotels and motels facing bed bug problems.

Learn more about how ActiveGuard mattress liners are helping hotels manage their bed bug problem by clicking HERE.

ActiveGuard Mattress Liners Featured in New Hotel E-Newsletter as Solution for Bed Bugs

December's Issue of Hotel & Lodgings'
PMP Magazine Introduces the Allergy Technologies E-newsletter

ActiveGuard is now on Facebook, Linked In & Twitter!

Click on the links above to visit our social media sites and learn more about ActiveGuard.

e-newsletter, ProductBriefs, had a nice feature on Allergy Technologies and ActiveGuard Mattress Liners. The inclusion in the e-newsletter, which is delivered to 15,000-plus hotel decision makers, showcased ActiveGuard as a proven, trusted solution as part of any bed bug protocol.

Hotel Comparison: Replacing Mattresses Versus Protecting them with ActiveGuard

As the cost of dealing with bed bugs continues to rise for hotels - from eradicating the problem to losing business directly as a result of being known as a "bed bug hotel" - the cost of replacing mattresses will continue to increase, as well.

According to mattress manufacturer Simmons, the average hotel replaces mattresses every seven years. But with bed bugs literally devastating these products, the cost of protecting them is significantly cheaper and provides a much greater value to the hotel and its reputation.

ActiveGuard mattress liners are helping protect the value of its client hotels both in cost savings and reputation. To learn more about ActiveGuard's attributes, read HERE.

Allergy Technologies is a subsidiary of A. Carey Co. LLC, which focuses on using philanthropy as a core business strategy for its businesses. Through its Philanprofit (SM) strategy, a portion of all ActiveGuard proceeds go to help fund inner-city homeless and women's shelters and asthma clinics.
